"400" SERIES PLUGS AND SOCKETS

(Formerly "Heavy Duty")

General Specifications

Made in 2, 4, 6, 8, 10 and 12 contacts. All Plugs and Sockets are polarized. Body of molded Bakelite. Phosphor bronze "knife-switch" type Socket contacts engage both sides of flat Plug Contacts—double contact area. Plug prongs are ¼" wide by $\frac{1}{16}$" thick. Caps are finished in Black Crystal and equipped with fibre lining. Plugs and Sockets arranged for cap or panel mounting.

Note: Standard angle brackets cannot be attached to S-402-AB due to narrow block and insufficient material for screw threads. A special bracket is supplied (Type 46) See illustration. The Socket fits into this bracket which is attached to panel.

Check the No. 2400 Series Plugs and Sockets listed on pages F-42 and F-43 which are similar to the 400 Series except their design increases the creepage distances and therefore can take higher voltages.

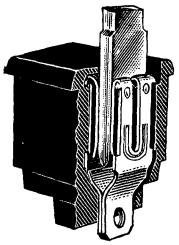
"2400" SERIES PLUGS AND SOCKETS

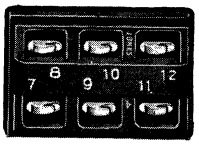
The 2400 Series Plugs and Sockets are designed for highest electrical and mechanical efficiency, and although they carry the same rating as the 400 Series, they will actually handle considerably higher currents due to their improved construction.

An entirely new type of socket contact has been designed. Four individual flexing surfaces make positive contact over practically their entire length. Note in the illustration how they exert maximum pressure at every point. Also note unique method of anchoring terminals in the block—they cannot be moved up or down.

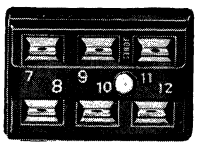


This design provides greater contact surface, increased pressure, with smoother action.

Socket contacts are of phosphor bronze, cadmium plated. Male contacts are of heavy brass ¼"x$\frac{1}{16}$", cadmium plated.



Solder connecting side of Plug Body showing Recessed Pockets with Barriers around contacts. Plug contacts are also in Recessed Pockets on opposite side.



Solder connecting side of Socket Body showing Recessed Pockets with Barriers around contacts. Socket contacts are also in Recessed Pockets on opposite side.

The contact to contact, and contact to ground distance has been considerably increased by mounting the contacts into recessed pockets with a Bakelite barrier surrounding and extending above. This method is used on both the top and bottom sides of both plugs and sockets, greatly increasing the leakage path.

The outside dimensions of corresponding plug and socket bodies are the same and can, therefore, be changed from brackets to caps, or vice versa.

Two styles of brackets are furnished "SB" (shallow bracket) for flush mounting and "DB" (deep bracket) for recessed mounting. Caps are furnished with flared hole in top or end, or with cable clamps in top or end. Unless otherwise specified the following size cable entrance holes will be supplied:

2402—⅜"	2406—$\frac{7}{16}$"	2410—$\frac{9}{16}$"
2404—$\frac{7}{16}$"	2408—$\frac{9}{16}$"	2412—⅝"

As noted above, the 2400 Series is furnished in 2, 4, 6, 8, 10, and 12 contacts. All plugs and sockets are polarized.

Plug and socket bodies are of molded Bakelite. The fibre linings in the caps are the same for both plugs and sockets.

A shoulder extends around the face side of plug and socket presenting a finished appearance when mounted in bracket or cap.

On account of this shoulder extending around the entire face of the body blocks, angle brackets cannot be used with the 2400 Series Plugs or Sockets.

The entire 2400 Series is interchangeable with the 400 Series as 2400 Plugs fit corresponding 400 Sockets, and 400 Plugs fit corresponding 2400 Sockets.

"500" SERIES PLUGS AND SOCKETS

Designed for 3,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}$" x $\frac{3}{32}$".

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from ½" diameter and 1¼" diameter in steps of ⅛", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

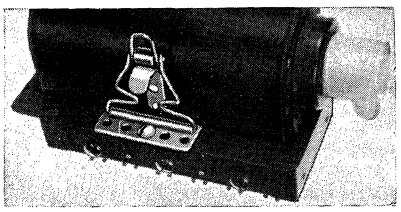
LOCKS FOR 500 SERIES PLUGS AND SOCKETS



No. 500-L Locks

Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

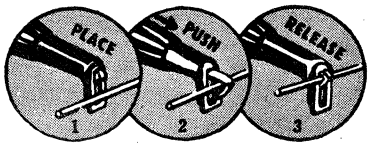
E-Z-HOOKs

A Revolutionary Concept in Test Connectors!

MODERN DESIGN ASSURES SAFER — FASTER — MORE POSITIVE CONNECTIONS

By utilizing a HOOK (the handiest connector ever devised) and an insulated FOOT (to hold it firmly in place) E-Z-HOOKs provide quick, easy connections and eliminate costly delays, shorts and intermittents. POSITIVE GRIP — NO SLIP. E-Z-HOOKs will save many hours in engineering design, bread-boarding, trouble shooting and test set-ups.

HERE'S HOW THE E-Z-HOOK WORKS:



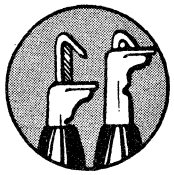
TO ATTACH:

1. Simply place the "foot" on the Test Spot.
2. Exert a slight forward pressure.
3. Release — and you have a vise-like grip that won't slip.

TO RELEASE: Just push slightly and turn.

USE THEM TIME AFTER TIME FOR POSITIVE GRIP — NO SLIP

Every E-Z-HOOK product is fully insulated. A Nylon sliding safety shield provides maximum protection against adjacent shorts and allows positive connections anywhere, even on flat, large or irregular test spots.



EASIEST OF ALL CONNECTORS TO USE: E-Z-HOOKs are self-adjusting for quick, positive connections. Their small, compact design, and sliding action, permits reaching crowded spots — even deep in a chassis. So the hands remain in the open, safe from shocks. Made of durable stainless steel and Nylon* — E-Z-HOOKs are built to last and are fully guaranteed to give satisfactory service. Always use E-Z-HOOKs when you need safe — fast — positive connections.

AMAZING NEW E-Z-HOOK "NAIL" CLIP

Drives into wood with a HAMMER!!

The new E-Z-HOOK Nail Clip is especially designed to provide a quick, convenient terminal for Breadboard Layouts, Demonstration Boards, and Experimental Hookups built on plywood or similar material. Ideal, too, for use on HARNESS BOARDS. The positive clamping action of the E-Z-HOOK connector and the time-saving "drive-in" design is an ideal combination for use in making all kinds of Harness Cable Assemblies.

ADVANTAGES: Quick and easy to drive into board with E-Z-HOOK Driving Tool. Can be readily pulled out and used over and over. Will not bend, nick or "balloon" the wire ends. Engineering changes in lead layout and connections easy to make. No drilling or counter-boring required, even on boards with Masonite overlays. Finger tip operation, no tools needed to operate. Nylon insulation minimizes danger from shock and shorts.

E-Z-HOOK CLIP TEST CONNECTORS

Specially designed for jumper leads, ground connectors and leads on all types of equipment. Assembly is quick and easy.

Actual Size

To remove body insulator, simply squeeze at A & B (Fig. 1). Pull firmly on insulator C. This will remove cover from connector (Fig. 2).

Now a positive, trouble-free solder connection can be made to the lead — indicated in Fig. 3. The joint is wrapped as in Fig. 3 — and iron or dip soldered. This method of attaching the lead relieves strain — increasing test lead life. To reassemble, simply slide the two units together. Colors: red, black, blue, green, orange and yellow.

E-Z-HOOK CUSTOM TEST PROBE

Designed with a built-in terminal board for ease in making your own special test probe assemblies.

⅔ Size

The positive grip, plus the sliding safety shield make this ideal for use on Electronic Test Leads. It is fast, efficient and safe. The built-in terminal board with special mounting lugs, makes it easy to make your own special test probe assemblies in minutes. A tenite* screw-on cover protects components and gives easy access to the terminal board. It is ideal for use with scopes, volt-ohm-meters, signal tracers, signal generators, substitution boxes, etc. It saves money in experimenting and servicing because it makes testing faster, easier and safer. Comes in red, green, black, blue, silver and orange.

E-Z-HOOK SUB CONNECTOR

Designed for temporary lead connections, substitute checks, experimental hookups, etc.

Actual Size

By making connections without soldering you save time, save wear and tear, eliminate solder tacking and reduce salvage. When this dual connector is utilized, burnt insulation, lead twisting and frayed wires are eliminated. Parts and circuitry stay clean and new-looking and Test setups are made easier and faster. Colors: red, black, blue, green, orange and yellow for easy lead identification.

E-Z-HOOK TIP ADAPTER

Designed to convert test prods to self-holding connectors.

Actual Size

Because the tip ADAPTER makes a test prod self-holding, hands are freed. Also, the sliding safety shield permits getting in close without shorting. The tip slips on or off easily, and has a special spring chuck (Fig. 5) to hold it firmly on the prod. Available in red, black, blue, green, orange and yellow.

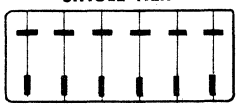
ELCO VARICONS

are the most reliable and versatile miniature connector system in principle and application. Varicons are basically designed to fill specific requirements and are not "just another" connector. They are the product of working to established requirements; and every feature is a direct result of an indicated need.

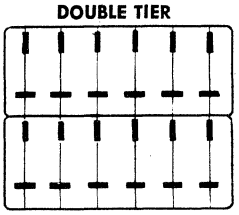
VARICONS were designed with primary consideration of mass production application; for quick and easy soldering of wire; or for solderless connections to contacts. Safe and positive cable retention and simplicity of installation is achieved by means of cable clamps.

VARICONS in any manner or in any equipment are limited only by the ingenuity of the user. Their small size, flexibility of contact arrangements and the following standard accessories make them adaptable to almost any installation or operating condition.

EXAMPLE OF SINGLE TIER



EXAMPLE OF DOUBLE TIER



GENERAL SPECIFICATIONS

Contacts in use are always under pressure and cannot be over-stressed or over-strained. Excellent retention maintained even after several thousand insertions and withdrawals. Both male and female contacts are free floating inside their respective housings.

Contacts are silver-plated and cadmium-plated. Cadmium-plated hardware for use in marine atmospheres. Standard covers are painted blue with wrinkle finish.

Current Rating 15 Amps., 115 Volts (in cover); 30 Amps. (in free air) (withstanding voltage between closest terminals 3000 Volts); Contact Resistance .002 ohm. Low Capacitance. All Male and Female components are identical. Contacts in use are always under pressure, cannot be over-stressed or over-strained.

CHEMELEC® SOCKETS AND CONNECTORS combine built-in reliability and simplicity of construction to form outstanding products for electrical and electronic circuits. They withstand rigid government tests for mechanical shock and vibration. Chemelec Sockets have zero water absorption, will not carbon track, exhibit low loss factor; Chemelec Connectors are available in standard R.M.A. colors; styles for compression mounting. Both will operate over various service ranges between −100°F to +500°F, will withstand extreme pressure altitudes. Garlock Catalog AD-169.

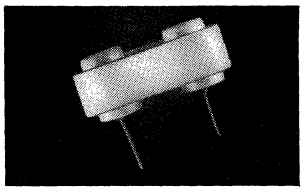
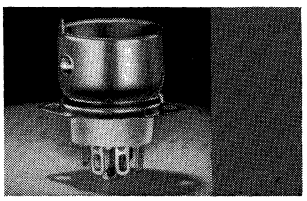
CRYSTAL SOCKETS



(Part 69007-4410)

Designed for use wherever low loss, frequency stability and mechanical shock and vibration are problems. Chemelec Crystal Sockets mount by means of a single hole, and can be either screwed or riveted. Assembly is facilitated by the elimination of breakage, a problem common with ceramics. Insulator is Teflon TFE. Contacts are beryllium copper, silver plated. Priced from 43¢.

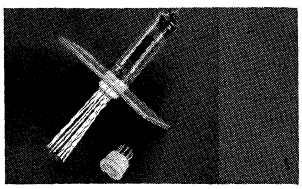
MINIATURE TUBE SOCKETS



(7 and 9-Pin, Shield Base)

Insulator material either Teflon FEP or KEL-F. Base material either steel, cadmium plated or brass, nickel plated (plating meets JAN specifications). Contacts are beryllium copper and silver plated. Contacts exceed JAN specifications for tube retention, tab flexing and contact resistance. Sockets are supplied with or without center shield. Priced from 60¢-70¢.

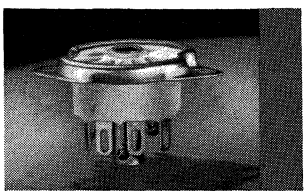
SUB-MINIATURE TUBE SOCKETS



(Compression Mounted)

Insulation material is Teflon TFE. Contact material is brass or beryllium copper. Contact finish is silver plated and gold flashed. Several types and sizes available with varying capacitance, chassis retention and contact retention characteristics, depending on size. Priced from 76¢.

MINIATURE TUBE SOCKETS



(7 and 9-Pin, Saddle Base)

NEW! MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028 Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. It offers the speed, free-handed ease and convenience associated with other Mueller alligator clips. The Micro-gator is truly small (takes 30 to weigh an ounce!) Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample $\frac{7}{32}$" jaw spread. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

Sold only as a unit, with factory-applied insulators.

A radically new development that doubles the usefulness of Alligator Clips! Completely insulated right down to the nose. Flexible 2-piece skin-type vinyl insulator of high dielectric strength, with "lip action" slotted nose that permits opening of clip without exposing metal. Insulator nose is only 15/64" O.D. The tight fitting sheath preserves all the slimness of the Alligator Clip, still giving complete protection against shorts in even the tightest spots. These clips could be bunched together—touching all around—without danger of shorting. Screw connection easily made by slipping insulator forward.

Current carrying parts gold-plated • Simplified, quick assembly

Socket and pin types of single conductor plugs and receptacles are offered. Plugs have a functionally designed grip for handling ease and convenience. Wiring connection to the same plug can be either soldered or solderless. Two cable-fastening screws are provided which permit a range of cable sizes to be accommodated by the plug. All socket plug grips and 25 and 250 ampere pin plug grips are of a simple, two-piece threaded construction for quick assembly. The 50 and 100 ampere pin plugs are assembled by a single nut after cable connection. All plastic parts of a receptacle are molded of the same color nylon to permit more rapid and accurate circuit identification on both the front and back of the panel when installed. Six colors are available.

Fluted Nut With **LEXAN*** Polycarbonate Resin

These are the *original* SUPERIOR 5-WAY Binding Posts in a new functionally styled design. They combine the long life, stable electrical contact, corrosion resistant, fast soldering characteristics of gold-plated brass with those of Lexan polycarbonate resin: low loss and power factor, high voltage insulation, superior heat resistance, non-sink dimensional stability, non-corrosiveness. The selection of six attractive colors and five ways to connect – plus the solder tip – provides wider use flexibility. Rated for a current capacity of 30 amperes and a working voltage of 1000 volts. Can be mounted in a single keyed or nonkeyed ½" hole in panels from 1/16" to ¼" thick. Fluted types with nickel-plated brass parts are available on special order.

*Lexan is the General Electric Company trademark for its polycarbonate resin.

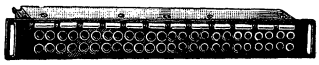
AUDIO JACK PANELS



Extensively used in the broadcast field, on instrumentation systems, communication networks, etc. Listed below are the most common of a large variety of standard types. Jacks as ordinarily supplied (mounted on panels) have offset ground lugs, which considerably reduces wiring cost of installation. Straight ground lugs (duplicating W.E. jacks) available. Types 96-71 and 96-72 used with tip, ring, and sleeve plugs (No. 516 and No. 517); others usually used with twin plugs (No. 506) but will fit standard two-circuit plugs.

VIDEO JACK PANELS

A variety of standard as well as special panels are regularly produced. The jacks used in these mount in the same hole size as standard telephone types and can be assembled on any of our regular mounting strips described elsewhere. Listed below are several standard types of panels as usually used in broadcast stations. All use the No. 89-02 jack except panel No. 99-80 which uses No. 89-32 type jacks. The "99" series use an aluminum, sandwich-like panel construction. The "96" series use standard ⅝″ thick bakelite panels. Of these, those with "—80" numbers are intended for direct attachment of the cable. Those with "—90" numbers have, behind the main panel, a sub-panel on which are mounted Amphenol No. 83-1R connectors from which wiring may be run to the coaxial jacks. Wiring not installed by TRIMM unless specified by purchaser.

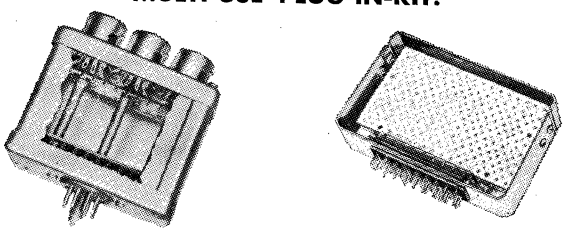
MULTI-USE PLUG-IN-KIT:



TUBE SOCKET TYPE TRANSISTOR TYPE

MULTI USE PLUG-IN KITS enable the user to readily wire and package a wide variety of circuits. Kits consist of an aluminum case with plug and accessories for mounting (a) Tube Sockets, or (b) Transistor type assemblies. For the tube circuits the Lip-Loc Case units (see left fig.) are used. These include the following parts: Mounted noval sockets, shield bases, 2 Zip wiring decks, and 11-pin Octal plug plus extra components as follows: equal number of 7-pin miniature sockets, shield bases and adapter mounting rings; plug buttons to close unused socket holes; one extra unpunched base with spacers and screws for mounting larger plugs such as the Amphenol Blue Line (not supplied in kit); one extra zip wiring deck. The extra components may be readily installed as required in place of the furnished items.

For transistor and printed circuit assemblies the Frame-Loc type case shown at the right above is used with Elco Varicon 16 pin plug and optional perforated epoxy-paper center wall with 1/16" holes on alternate centers of a 0.1" grid. T28 Push-In Terminals supplied (not installed).

Material specifications are as follows: case, caustic etch on aluminum; sockets, mica-filled phenolic, commercial grade; terminal strips and spacers are phenolic for tube units and epoxy-paper for transistor units. Overall height of all units is 3".

SOCKET EXTENDERS provide a replaceable unit for use in tube testers. Wear is shifted from the socket in the tester to the one in the Extender so that when it is worn out a new one can be easily inserted. Sockets have highest grade beryllium copper contacts. A screw projects thru the plug and may be used to hold the unit firmly in place if desired. Socket to plug leads are soldered and an outer shell is used.

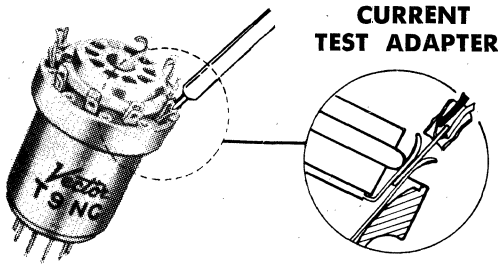
CURRENT TEST ADAPTERS



Versatile VECTOR CURRENT TEST ADAPTERS make possible tube circuit current or votage measurements without cutting leads or making computations. All measurements may be made from the tube side of the electronic equipment without disturbing the chassis.

THE ROTOPROBE

THE ROTOPROBE is a new type of test adapter to which a rotating test lead is permanently attached. Rotation of the shell causes a contact arm to move across the pins connecting the socket elements so that any position may be quickly contacted. This serves the same purpose as the usual Test Adapters but is more convenient and faster.

CABLE CONNECTOR PLUGS

CABLE CONNECTOR PLUGS permit connecting cables to miniature and noval tube sockets. Aluminum shells are fitted to 7-pin and 9-pin plugs. In type "C" a rubber grommet (with ¼" hole) is mounted in the side wall and a center screw holds the assembly together. In type "D" a Heyco strain relief grommet is mounted in the end of the shell and the base screws hold the shell on the plug. Approx. length (exc. pins) 2.125".

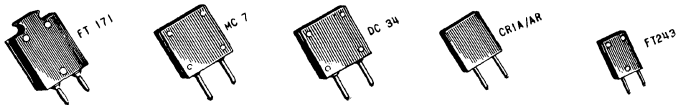
TEXAS CRYSTALS...*FOR EVERY PURPOSE*



CRYSTALS MADE TO ORDER

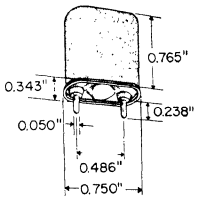
1,601	to	2,600 KC	.005% TOL.	$2.75
2,600	to	9,000 KC	.005% TOL.	$2.50
9,000	to	10,000 KC	.005% TOL.	$3.00

Made to order crystals in pressure type holders can be supplied in five types as shown. All TEXAS CRYSTALS are cut, lapped, and etched to exact frequencies. They are supplied for oscillator circuits having 32 MMFD capacity, unless otherwise ordered, as the crystal frequency will vary with capacity of the circuit.

Low frequency crystals from 1001 KC to 2100 KC are space mounted —all others are pressure mounted. The advantage of the pressure mount crystal is its ability to handle more current (up to 50 Milliwatts) without fracture. Order by frequency, type holder, tolerance, and circuit capacity (if known) or type of equipment in which it is to be used.

HERMETICALLY SEALED CRYSTALS MADE TO ORDER



HC 6/U .050 PINS

In recent years, manufacturers have engineered new equipment utilizing the hermetically sealed plated crystal (HC6/U). This crystal is either gold or silver plated, the plating acting as electrodes. These crystals should be used in circuits designed for them as the maximum current capacity is 10 milliwatts (5 milliwatts for overtone type). High stability of frequency is a characteristic of this crystal. All TEXAS CRYSTALS are made to conform with military specifications. When ordering for G. E., Motorola, Link, etc., for split channel operation, a sample of both transmitting and receiving crystals known to be correct, be sent us with order specifying exact crystal frequency desired. We will correlate crystals and return your samples. Type HC6/U has .050 pins and fits CE-1 socket. Type HC17/U is the same physical size except the pins are .093 diameter. Specify type circuit, if known. Order by fundamental frequency, type circuit, type holder. All plated crystals are .005% tolerance.

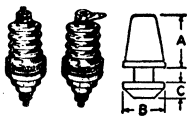
CORRUGATED FEEDTHRU INSULATORS



The six new corrugated type feedthru insulators have more than twice the leakage path of the straight type because of increased surface of the corrugations and recommends itself where a straight side insulator of equal height is not satisfactory because of its shorter leakage path. Brass nickel plated hardware and cork mounting washers supplied.

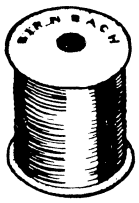
NEW FROM BIRNBACH INSULATED *GLAS-LINE* CABLE



Provides complete isolation of any antenna system where support must be obtained from metallic objects such as towers, windmills, etc.

NON-INDUCTIVE • NON-CONDUCTING • NON-ABSORBING • NO SAG • NO ROT • NO SHRINK • FLEXIBLE • USE FOR DIRECTIONAL ARRAYS, BEAMS, RHOMBIC SYSTEMS, ETC.

This Birnbach non-metallic guy wire is not to be handled as regular wire. Do not twist around itself for solid joint; it must be knotted firmly in place (use bow line knot) — use coupling devices such as our Nos. 472, 473 or 474 insulators. Must not be abraided by constant friction — will wear and break line; avoid tight turns. An open thimble should be used to couple the Birnbach "Glas-Line" cable to an eye-bolt at mast or tree. Glass fibers conform to Mil 1140 Spec. and plastic jacket conforms to Mil-I-631C Spec.

*The breaking strength indicated is applicable when "Glas-Line" cable is properly used.

DESCRIPTION: Fiberglass insulation with PVC insulation overall. Color coded per indicated tensile strength.

NEW SUB-MINIATURE TELFLON* terminals provide instant mounting without any extra hardware of any kind because of the exceptional properties of Virgin Teflon*.

Low dielectric constant, low power factor (60 cps to 30,000 mc), low capacitance, high volume, high surface resistivity, high dielectric strength (1500-2000 v/mil, s.t.), continuous service—450°F to plus 500°F, unaffected by soldering, chemically inert, damage resistant, water repellant, voltage rating, sea level 750v r.m.s., flash-over, sea level 3000v r.m.s., flash-over, 50,000 ft. 1300 v r.m.s.

Installed permanently in seconds, in metallic or non-metallic chassis in one, simple, corking motion into punched or drilled holes. Mounting Hole Data: 1. Punch or drill the hole to a diameter that is .012″ less than the diameter of the Teflon insulator which passes thru the chassis. 2. Where the thickness of the chassis permits, the entrance edge of the mounting hole should be countersunk 30° to the diameter of the insulator. Where chassis thickness will not permit (.040″ or smaller), countersink 45° to the diameter of the insulator.

Speeds up assembly—cut production costs, no nuts, washers, staking or soldering necessary especially adapted in crowded assemblies.

As for HF, VHF, UHF, microwave, radar, telemetering, guided missile instrumentation and circuitry. circuitry.

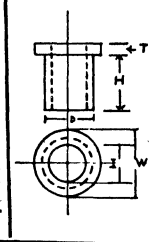
ALL-NYLON FASTENINGS

Zytel 101 per Mil P 20693 Spec, Mil S 7742 Spec

Birnbach All-Nylon Fastenings are made of Zytel 101*, a Polymide plastic of the Nylon 6.6 Type. They offer outstanding insulating properties plus resistance to heat, shock, vibration and chemical solvents plus lightness elasticity and superior torque strength. In most cases, because of their high dielectric strength, they eliminate the need of bushings, washers or other insulation. They are corrosion resistant, non-magnetic and good torque strength thru a wide temperature range. Continuous service temperature to 300°F (150°C). Stock color: Natural. Additional colors available to order. Zytel 101 per MIL-P-17019B.

BIRNBACH NYLON BUSHINGS AND SPACERS



Designed with wide flanges to completely isolate screw from mounting surface, useful where hi tensile and torque requirements require high strength non-insulating screws. Natural color.

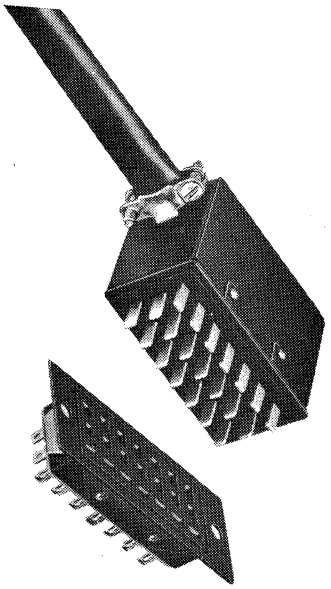
Birnbach "BEAUPLUG" PLUG AND SOCKET LINE

NEW Quality BIRNBACH *"BEAUPLUGS"* PLUGS and SOCKETS

Our 1300 Series, now available in 15, 18, 21, 24, 27, 30 and 33 contact configurations have cadmium plated brass knife contacts; socket has double spring design phosphor bronze contacts; male contact is 3/64" thick by 5/32" wide brass. Bodies compression molded bakelite; back plates, XXXP laminated phenolic to NEMA standards; and are adhered to the body by epoxy resin which eliminates vertical drive pins (they are dimensionally interchangeable with the C-J 300 Series.) For greater economy, protection and utility the new molded high density polyethylene backshell is outstanding; this "Beauplug" series is attractive in appearance; highly impact resistant; non rusting, highly resistant to most acids and alkalis and is of one-piece molded construction thereby eliminating the use of additional insulating materials since it has excellent dielectric properties.



Connectors are rated at 750 V RMS and 10 amperes contact resistance is .003 ohms maximum. (Note — the third and fourth digit in the Part Number indicates the number of contacts.)

All Plugs are polarized to assist in correct insertion and removal. Plug numbering is opposite. Heavy duty locating or ground pin replaces contacts in position 14 on 1324, 1327, 1330; it is in position 17 on 1333. The ground pin and its socket are machined brass, heavily plated, with a 20 Amps current capacity.

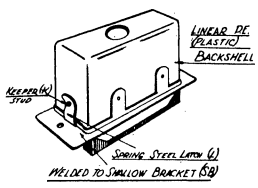
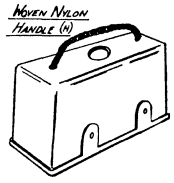
ACCESSORIES FOR THE BIRNBACH "BEAUPLUG" 1300 SERIES



LATCH (-L) and KEEPER (-K)

LATCHES (-L) are installed on Shallow Brackets where a constant engagement of Plug and Socket must be insured, such as in Mobile Radio equipment. Usual installations call for a latch on each end of the Shallow Bracket as shown. Example: this is an S-1321-SB-L (21 contact Socket, Surface Bracket & Latch) KEEPERS (-K) are the studs on the Backshells which engage latches. Mating part here is S-1321-FHT-K



HANDLE

HANDLE (H) is generally used with the larger plugs or sockets using backshells. It is a simple device, made of woven Nylon cord, and can be almost entirely retracted inside the backshell. No metal parts are used, preventing any chance of shorts. Example: adding the handle to the Socket above, would be S-1321-FHT-H

HANDLES FOR BACKSHELL, designated -H (Example: P-1324-CCT-H) -H Handle only add $.65 List Each

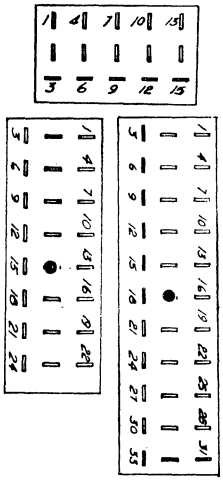
"BEAUPLUG" DESIGN INFORMATION



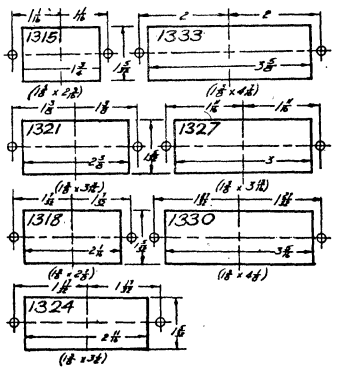
Backplate Numbering and Contact Information

The drawing illustrates the polarizing arrangement of **Sockets:** Plug numbering is opposite. Unless otherwise specified, a heavy duty locating or ground pin replaces the contacts in Position 14 on the 1324, 1327, 1330. However, it is in Position 17 on 1333. The ground pin and its socket are machined brass, heavily plated, and have a current capacity of 20 amps.

Other contacts have a Rated Voltage of 730 RMS and a current capacity of 10 Amperes. Contact resistance is .003 Ohms maximum. All contacts, which normally are .0002" cadmium plated, may be silver plated at slight extra cost.

Backplates, on which the numbers appear, are XXXP laminated phenolic NEMA Standard, and are adhered to the body by Epoxy resin, which eliminates vertical drive pins. Alignment of contacts is maintained by an ingenious locating system.

1315 to 1333 Backshell (or Cap) Dimensions and Details



Made of High Density Polyethylene, the new "BEAUPLUG" Backshell is highly impact resistant, non-rusting, highly resistant to most acids and alkalis, and is of one-piece molded construction. Has excellent dielectric properties. The basic dimensions remain constant, and configurations are as follows:

- -FHE (Flared Hole, End)
- -FHT (Flared Hole, Top)
- -CCE (Cable Clamp, End)
- -CCT (Cable Clamp, Top)

Note: We strongly recommend using the Braided Nylon Handle, (-H), when using 1324 to 1333 Plug and Socket combinations, because of the tight fit of the ground pins and their sockets, requiring greater force for disengagement.

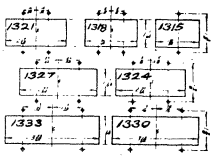
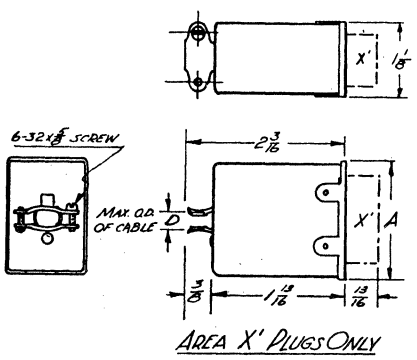
Panel cutout dimensions 1/64" clearance for Plug or Socket block. All Angle Bracket holes .152" diameter, for 6-32 screws.



1315 to 1333-SB and -SB-L Mounting Dimensions



Use Panel Cutout dimensions in the drawing below for both the **Shallow Bracket** (-SB) and the **Shallow Bracket** with **Latch** (-SB-L), for either Plug or Socket mounting. All mounting holes are .187" diameter, and are located at the end of the opening rather than the sides (as with the Angle Bracket -AB Series.) Note: Outside dimensions of the Shallow Brackets are shown in parenthesis below each drawing.

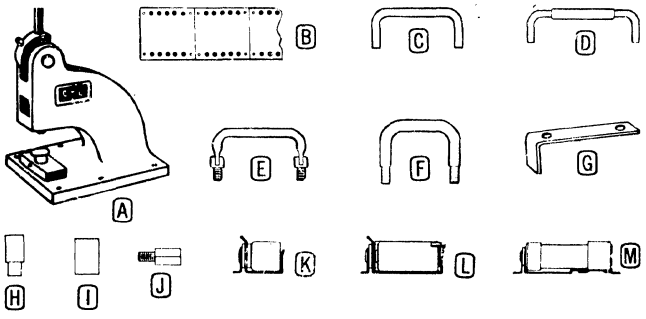
HARDWARE



ARBOR SWAGERS (FIG. A)

Specially designed by Cambion for mounting Cambion terminals on terminal boards. These Arbor Swagers are sturdy, precision-built, hand operated, cam action rolling tools; designed for quick, solid uniform swaging of solder terminals. Adjustable to a wide range of terminal board thicknesses by setting the anvil at the proper height. Terminals may be swaged, in place, as far as 1⅞" from the board edge. Pressure is adjustable and uniform, assuring good, even peening. Furnished complete with one set of tooling. When ordering, specify terminal to be staked. PSA (anvil) and PSP (punch) toolings are used with the Arbor Swager. Net Each **$46.00**

BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These barriers follow around the edge of the Strips and terminate at the zase. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite. The Eyelets and Binder Screws are of brass, nickel plated. The ¾W or Y terminals are of brass, hot tin finish.

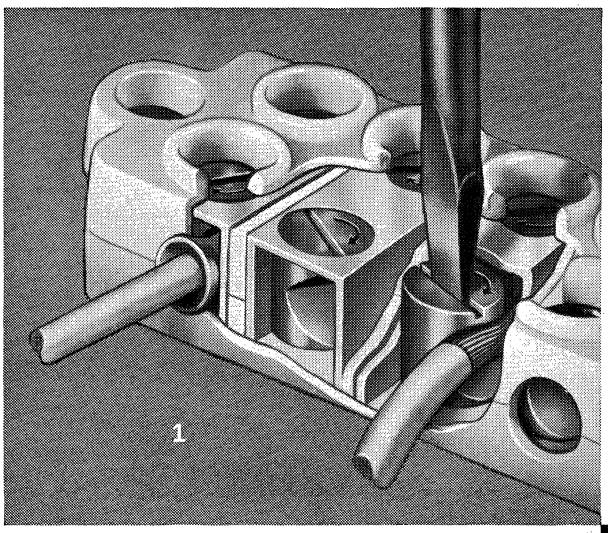
NEW concept for electrical connections



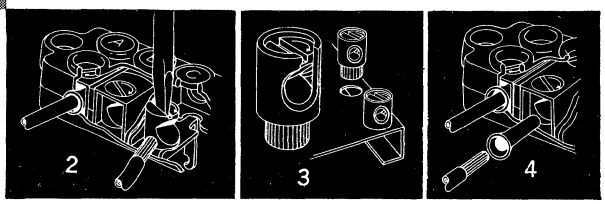
CAMBLOCK

1 TERMINAL BLOCK CONNECTORS

2 PULL-THRU CONNECTORS

3 SUPERIOR BINDING CAMPOSTS

4 WIREGUARDS



CAMBLOCK has solved the problem of obtaining a better and more positive electrical connection through use of a basic new principle — Cam Action! Wedging action of a reverse rotary tapered V-cam assures positive locking, eliminates the use of screws, lugs, solder and special tools.

With either CAMBLOCK Terminal Block or CAMBLOCK Pull Through Connectors, (for thru-chassis applications) average wiring time is cut 75% . . . a turn with a screwdriver connects or disconnects. Field service and maintenance are simplified because there are no special tools or parts to handle. Terminal Block Connectors take wires from #12 to #30 gauge, and will accept multiple wires in each socket without any special preparation. CAMBLOCK's Pull-Thru Connectors all thru-chassis applications of from 2 to 20 wires. Identification points permit easy marking of connector terminals. By making every strand a conductor, both block and pull-thru types assure better connections, electrically and mechanically.

Versatile CAMBLOCKS find application in virtually all types of electronic and electrical equipment, including aircraft, automotive, marine, and military products, appliances and lighting equipment.

CAMPOSTS are superior binding posts. They are screwless, solderless and positive locking. CAMPOSTS eliminate cold solder joints and lugs, no need for soldering irons and crimping tools! Like all CAMBLOCK products, CAMPOSTS make every strand a conductor.

WIREGUARDS by CAMBLOCK feature self-crimping copper sleeves . . . CAMBLOCK's cam action simply crimps wireguards with a turn of a screwdriver. WIREGUARDS' one step operation protects the wire indefinitely, reduces costs by eliminating special tools.

Want to make a better connection . . .? Take action — "cam" action. Write for details and price lists on all CAMBLOCK products.

Available with any number of stations from 2 thru 20, in 15, 20, and 30 amp capacities in both straight and feed-thru designs.

Dielectric strength up to 4000 V between terminals, 5000 V between terminals and base . . . withstand at least 11 G's vibration (60 cps double amplitude) and up to 450 lbs. of high impact shock.

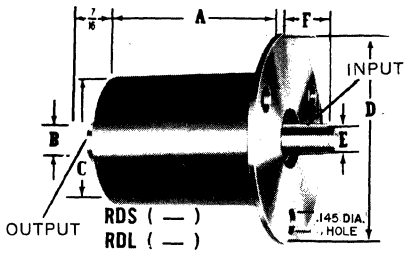
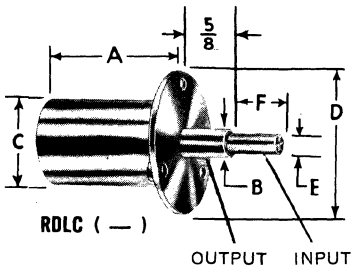
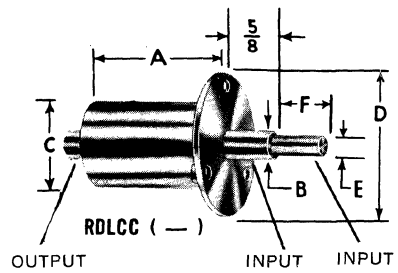
RATIO DRIVES

for FINE INSTRUMENT AND MACHINE CONTROLS







RATIO DRIVES—Ball Bearing Type

Compact, durable, exceptionally smooth action

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Types "RDL" and "RDS" provide "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLCC is the output shaft in the rear. The front concentric can be used as a coarse tuning (1:1 ratio to the output in the rear) and the small diameter shaft in the front can be used for fine tuning.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S WORM GEAR RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

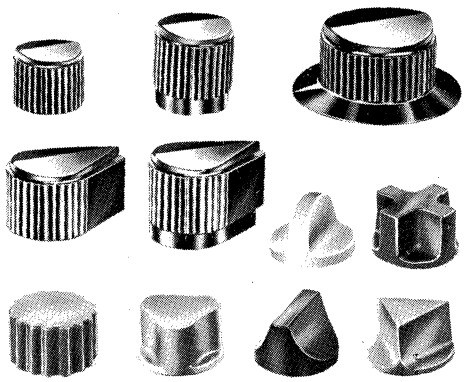
DELUXE CONTROL KNOBS

GUARANTEED TO MEET ALL PERFORMANCE CHARACTERISTICS OF MIL STANDARD 91528

A popular series of high-styled non-combustible knobs, molded from our specially formulated plastic (KR-23). Withstands thermal shocks from —75° to +85° C. Anodized aluminum insert with 2 set screws at 90° insures firm attachment to control shaft. Available with dial skirt, with plain skirt or without skirt. Finishes: Dull matte or glossy. Special colors on request.



SLIP-CLUTCH, SAFETY KNOBS

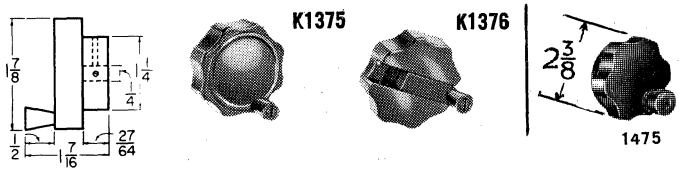
With Fixed or Retractable Spinners

Cat. No. K-1375 (For ¼" shafts)

Designed for driving devices such as variable capacitors, inductors, potentiometers, etc., these knobs are based upon the principle of the "slip-clutch", automatically disengaging and slipping when a pre-determined torque has been exceeded. JAN'S SLIP-CLUTCH SAFETY KNOBS are fluted to aid in sensitive adjustments and are equipped with either a fixed or retractable spinner for fast turning. Insert-molded-to-Bakelite construction provide durable, backlash-free units to safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

Cat. No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

Cat. No. K-1475 Slip-Clutch knobs are designed similar to No. K-1375 except for larger dimensions and utilize cast aluminum in place of Bakelite.



SPINNER KNOBS

With Fixed or Retractable Spinners

Cat. Nos. K-1275 & K-1276 (For ¼" shafts)

In appearance, these knobs are identical with No. K-1375 and No. K-1376 but without JAN'S Slip-Clutch mechanism. Made with single-unit, molded Bakelite-to-metal-insert construction, with two set screws for firm attachment to shafts.

ALL KNOBS CAN BE FURNISHED TO FIT ⅛" - 3/16" or ¼" SHAFTS

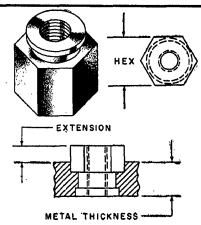
This type of captive nut fits flush on both sides of aluminum or brass sheet to provide strong permanent tapped holes.



TYPE 2

The following standard Type 2 nuts have found wide use where additional threads are desired in 1/16 inch metal thickness to meet MIL-E-5400, MIL-E-164000, and MIL-P-11268.

Part Number	Screw Size	Metal Thickness	Extension Length	Mounting Hole
NCN-4-2-2-1	4-40	1/16	1/32	.203 ±.002

NCN-10-2-2-1	10-32	1/16	1/32	.265 ±.002

In addition, the National Radio Company supplies a wide variety of Type 2 nuts in various lengths which provide additional thread length or a hexagonal stand-off for compressive loads. These nuts may be specified according to the following part numbers.

NCN — 4 — 2 — 2 — 1

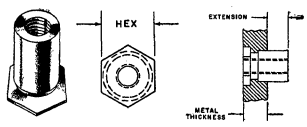
								6	....
								..	....

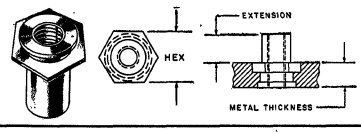
These nuts may also be provided with counterbore, to customer specification.

TYPE 3



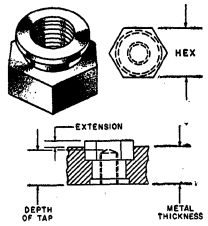
This captive nut has extra thread length for use in thin aluminum or brass panels. It may also be used as an orientation or guide device, or to provide a round stand-off pillar for tensile loads. Note that Type 3 captive nuts may also be used in metal thicknesses greater than those specified. The extended length then will be reduced by the thickness of the additional metal. For strongest insert always use the proper size.

TYPE 4



This captive nut is primarily intended for applications where extra thread length is desired, or for use as a round shank stand-off for compressive loads. These nuts may also be provided with counterbore to customer specifications.

TYPE 5



This captive nut provides a waterproof, blind hole for applications where through tap is not required. This type of captive nut is generally made to customer specification. Customer specification should include the following information:

1. Screw size
2. Hex size
3. Extension length
4. Depth and type of tap
5. Metal thickness
6. Counterbore if required

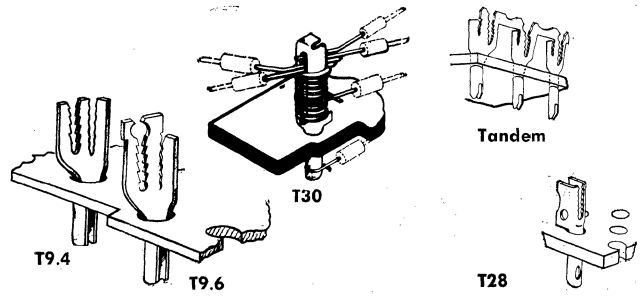
VECTOR PUSH-IN TERMINALS



VECTOR PUSH-IN TERMINALS simplify "breadboarding" and production. Push them into .062 or .093 holes in 1/16" or 3/32" Vectorbord panels and they hold without staking. (May be staked if desired for maximum holding.) Each terminal has serrated slots to grip inserted wires. Large slot accommodates most resistor and capacitor wires, small slot holds transistor leads. The T9.6 also has special slot to accommodate diodes. All types have thru-hole construction enabling riser wires to be inesrted down through center of terminal, and slot or hole in shank end for additional connections.

SOLDERLESS SPRINGCLIP TERMINALS—Reliable, truly solderless terminal for experimental circuitry. Holds up to six leads without soldering. May be used over and over—permits reusing expensive components. Packaged in bags of 10 and 100.

VIBRATING REED FREQUENCY & TIMING INSTRUMENTS

GENERAL DESCRIPTION

Vibrating Reed Instruments are direct reading frequency indicators for use where the efficient operation of A.C. equipment depends upon the maintenance of known or constant frequency. They are self contained, their accuracy is not affected by wide voltage variations or wave form distortions and require no auxiliary apparatus. They consist of a number of steel reeds, of high Q, each of which is tuned to a single frequency within the band covered by the instrument. Indication is by visual pattern formed by the vibration of the reed in resonance with the line frequency. Excitation is electromagnetic, and the reeds are the only moving elements. **Running Time Meters** are synchronous motor operated instruments to automatically measure service periods or service requirements.

APPLICATIONS

A large demand exists for VIBRATING REED FREQUENCY METERS for use with engine driven A.C. generator units as this is the most simple speed and frequency indicator yet devised for A.C. generator sets. These meters are also generally used in laboratory and portable test equipment, electronics, telephony, aircraft, industrial plants and numerous applications where electrical frequency indication is desired. Engineering services are available for those desiring assistance on their application problems. **Running Time Meters** are often used in conjunction with reed type frequency meters.

AMPROBE CABLE TRACER

LOCATE UP TO 10 CABLES SIMULTANEOUSLY

Now you can trace conductors in cables and conduit 10 times faster than ever before — and leave your helper free to finish other jobs quickly and profitably. A tracing system in itself, revolutionary new CABLE TRACER lets you search — and unmistakably identify—up to 10 separate circuits simultaneously. What's more, with CABLE TRACER there's no needless handling of wires to locate a conductor. Every time the Indicator Button is pressed, you identify a circuit. And you do it without extra trips between conductor ends. **PRICE $39.50 ***

AMPROBE JUNIOR

The only voltage testers in their price class that also measures amperage. They are precision instruments that measure instantly and accurately on a calibrated scale ±3% full scale (not just an indication).

HOYT moving-coil Meters are built on the D'Arsonval principle using carefully selected jewel bearings and polished steel pivots. Accuracy within 2%. Alnico Magnets with soft-iron pole-pieces of uniform flux density used in all movements. Permanently correct balance assured by HOYT "cross arm" spiral wire balance. High torque to weight ratio. Quick response and good damping under all conditions. Choice of "knife-edge" or "lance" type pointers. Full 100° movements standard on most models.

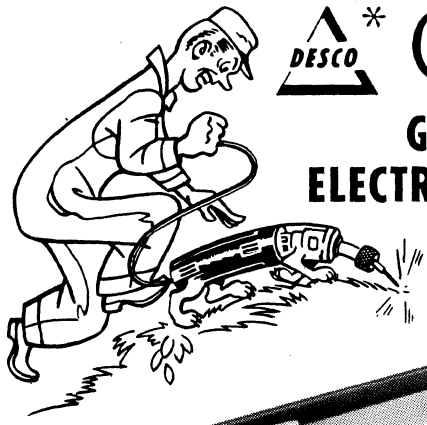
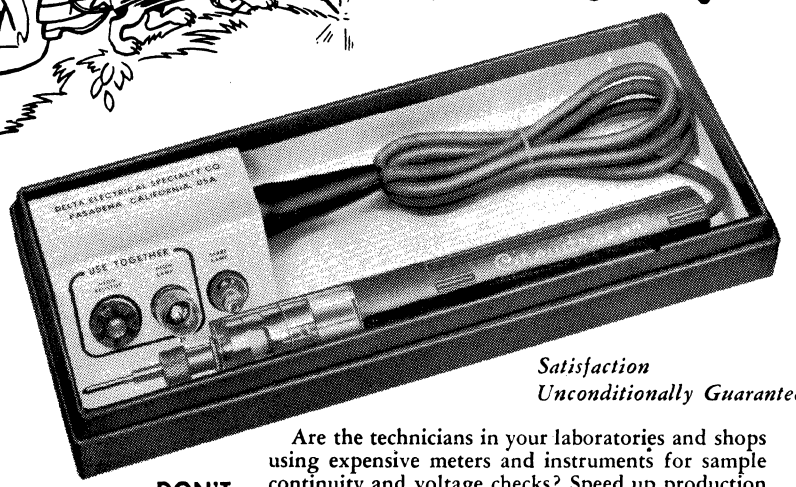
Tracks 'em Down Dead or Alive

ONLY THE VERSATILE DESCO Circuitracer*

GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

Pocket Size!





Satisfaction Unconditionally Guaranteed

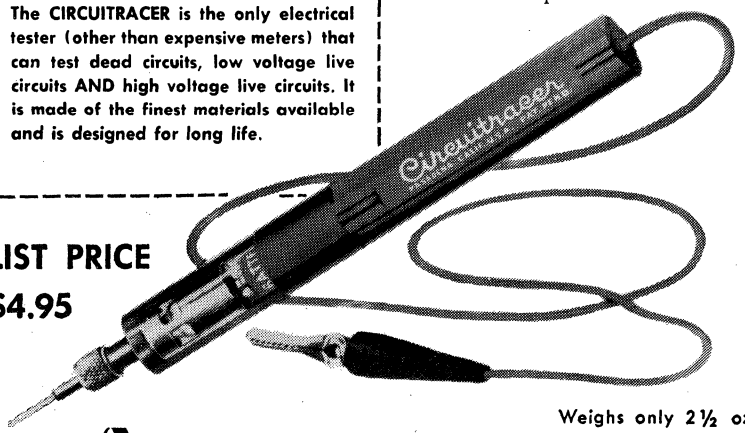
DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.

SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.



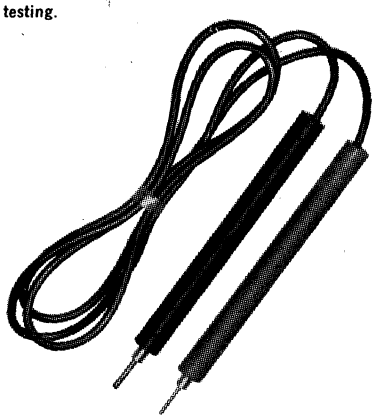
LIST PRICE $4.95

Weighs only 2½ ozs.

RELIABILITY PROBLEMS?

MAINTAIN CONNECTOR RELIABILITY WITH TEST LEAD ADAPTERS FOR MIL CONNECTORS

Military requirements for reliability of electrical components in missiles and aircraft are becoming more stringent each year. The quality built into these components can be rendered useless through improper probing of the connectors while circuit testing.



The Desco test lead adapters are made to MIL Specifications to fit both pins and sockets of connectors using #20, #16 and #12 wires. The sockets are gold plated copper with a brass sheath which retains a beryllium copper spring. The pins are polished stainless steel to assure long life.

When testing individual circuits in electrical connectors use of the proper Desco test lead adapter will assure correct mechanical and electrical contact without possibility of damage to the pin or socket under test.

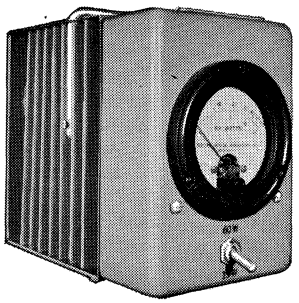
EMPHASIZING MAINTAINABILITY

1. Calibrate these Power Meters in your plant or laboratory against low frequency power standards at power line frequencies. No need to ship to manufacturer for repair and recalibration.
2. No correction curves necessary.
3. Simple operation.

200 KC TO 500 MC — GREATLY IMPROVED



Model PM-10

- **Portable, Continuous Duty.**
- **Can be recalibrated anywhere with DC or Alternating Current Power against a low frequency standard.**

These broad band R.F. Power Meters are of the absorption-type consisting of an oil filled, air cooled, coaxial load resistor and a voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. The meter box is easily detached, permitting location of the load resistor at a remote point. In cases where power measurements are not required the load resistor may be used as a dummy load. No correction curve is necessary to cover the frequency range. The spurious response usually associated with directional couplers and capacitative voltage dividers is absent in this purely resistive voltage divider. Since this is a resistive voltage divider which has the same voltage division at DC, 60 cycle AC, and at high radio frequencies, this instrument can be calibrated and its calibration can be checked frequently on 60 cycle supply voltages.

100 KC TO 200 MC

- **Intermittent Duty.**
- **Portable.**
- **Can be recalibrated anywhere with DC or Alternating Current Power against a low frequency standard.**

These broad band R.F. Power Meters are of the absorption-type consisting of an oil or air filled, air cooled, coaxial load resistor and a voltmeter calibrated to read watts. The power meter is suitable for use as a field or laboratory test instrument, is completely shielded and non-radiating, permitting transmitter testing and adjustment without interference. It is designed to operate in the frequency range of 100 KC to 200 MC with an accuracy of plus or minus 5%. In this Power Meter a resistive voltage divider is used. This voltage divider has the same voltage divisions at DC, 60 cycle AC and throughout the frequency range up to 200 MC. Because of this feature it is possible to calibrate this Power Meter and its calibration can be checked frequently with DC power or with 60 cycle power. Since this is a resistive voltage divider, the spurious response usually associated with directional couplers in capacitative voltage dividers is eliminated.

AC VTVM #255

Kit $44.95 **Wired $72.95**

Identical to #250 above, but less the amplifier.

AC VOLT-WATT METER #260

Kit $49.95 **Wired $79.95**

AC voltmeter and load-compensated audio-wattmeter of unique quality and accuracy. Measures AC voltage from 1 millivolt to 1000 volts in 11 ranges, and power from .015 milliwatt to 150 watts, in 7 ranges, across standard loads from 4 to 600 ohms.

The instrument incorporates a tapped power resistor load (4, 8, 16, and 600 ohms) to handle up to 80 watts of power on 8 ohms, and 40 watts on other taps. It may be switched to external load up to 150 watts. The meter is automatically compensated for any load selected, internal or external, to provide a single watt scale for all loads and ranges.

The instrument is an average reading device calibrated in RMS voltage or power of a pure sine wave. The 0-1, 0-3 voltage scales are linear and the single 0-1.5 power scale is quadratic. In wattmeter use, the decibel scale reads directly in dbm with any of the four standard loads. In voltmeter use, the decibel scale reads directly in dbm with a 600 ohm load; corrections must be applied for any other load. (0 dbm = 0.775 V across 600 ohms). The interval between successive wattmeter or voltmeter ranges is 10 dbm. **VOLTMETER Ranges:** .01, .03, .1, .3, 1, 3, 10, 30, 100, 300, 1000 RMS volts. **Frequency Response:** ±0db 10c to 150kc, −3db at 500kc. **Input Impedance:** 2 megohm shunted by 15mmf. **Accuracy:** ±4%. **WATTMETER Ranges:** .15mw, 1.5mw, 15mw, 150mw, 1.5W, 15W, 150W. **Frequency Response:** ±0db 10c to 100kc. **Accuracy:** ±5%. **Internal Loads:** 4Ω (40W), 8Ω (80W), 16Ω (40W), 600Ω (40W). **External Loads:** 4Ω, 8Ω, 16Ω, 600Ω (all to 150W). **Tube Complement:** 6-BL8/ECF80 pentode-triode, 12AT7 dual triode, 0B2 voltage regulator. **Power Requirements:** 105-125 VAC, 60/50c; 15 watts drain. **Weight:** 6 lbs. **Size (HWD):** 8½″ x 5¾″ x 7″.

1350 Decade Capacitor

The Freed series of Decade Capacitors covers a wide range of values and can be supplied as individual decades from 0.0001 mfd. per step to 1 mfd. per step or in various combinations of assembled decade boxes.
Single decade units can be assembled in different capacitor values for use in experimental and permanent equipment. The decade boxes are useful for laboratory work in bridge measurements and as components of filters and tuned circuits.
Polystyrene dielectric is used in the manufacture of the capacitor assemblies with the exception of the 1 mfd. per step unit which uses Mylar as a dielectric. All capacitors are non-inductively wound and heat treated for stability, low dielectric absorption and low losses.
Each decade is variable from 0 to 10 by use of 11 position selector switch. The losses in the switches and mountings are kept low by the use of special low loss, impregnated switch wafers. A positive detent mechanism allows the switch to be set accurately.

SPECIFICATIONS

Accuracy: Individual capacitors are adjusted to an accuracy of ±1% when measured at 1kc. The capacitance at the terminals, less the zero capacitance, is within ±1% of indicated dial setting. The zero capacitance of the decade boxes is supplied with each unit. Single decade units have a zero terminal capacity of approximately 8 mmfd. except Type 1419, which is compensated for true terminal capacity.
Dissipation Factor: The dissipation factor of the polystyrene units when measured at 1kc is less than 0.0002, the 1 mfd. per step decade (Mylar) is less than 0.005.
Maximum Voltage: The maximum voltage that may be applied to these decades is 500 DC working volts.
Note: Individual capacitors can be supplied to better than ±1% Tolerance. Write for complete information.

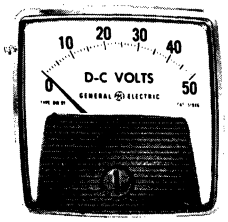
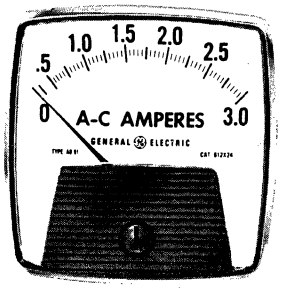
PANEL METERS

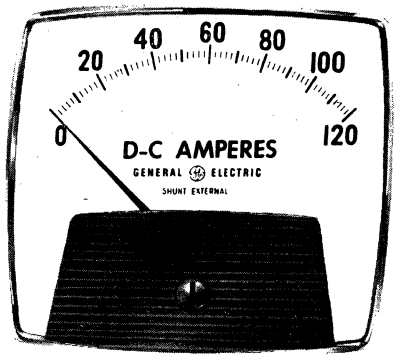
THE BIG LOOK IN SMALL PANEL METERS



2½-inch design
Type DW-91 Voltmeter



3½-inch design
Type AO-91 Ammeter



4½-inch design
Type DO-92 Ammeter

General Electric's BIG LOOK panel meters offer such added values as distinctive appearance, excellent readability, completely sealed cases and self-shielded d-c core-magnet mechanisms.

Distinctive Appearance

BIG LOOK panel meters are designed specifically to meet industry's increasing demands for panel components that contribute to end-product eye appeal. BIG LOOK panel meters—with their distinctive and modern, but not radical design—offer an important added value by complementing the appearance of the finest equipment.

Excellent Readability

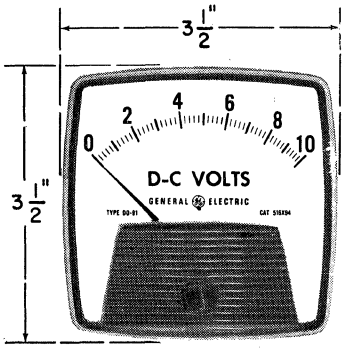
Big, clear, easy-to-read numerals are positioned above the scale divisions so that they cannot be obscured by the pointer. The absence of arc-lines and use of a slim, tapered pointer facilitates quick accurate readings. Functional cover design eliminates confusing shadows by admitting natural light from all sides.

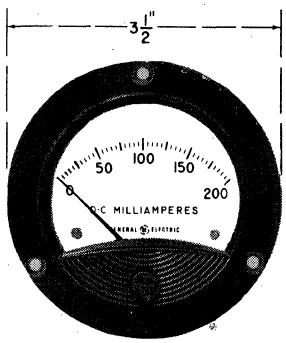
Completely Sealed Cases on 2½- and 3½-inch Designs

General Electric quality is built in to stay. Gasketed construction on 2½- and 3½-in. models protect internal parts from dirt, dust, and water and helps assure extra-long, reliable life.

Snap-on, Snap-off Covers on 4½-inch Designs

Snap-on, snap-off covers are supplied on all 4½-in. BIG LOOK panel meters. The covers can be easily removed and replaced while the meter remains in its normal mounted position.





As this size comparison shows, the new design appears to look much bigger, but will actually fit into the same usable panel space as older style meter.

D-C PANEL METERS

Shelf-shielded D-C Mechanism

Core-magnet mechanisms with inherent self-shielding are used for all d-c ratings. This permits mounting on magnetic or non-magnetic panels without special calibration and cluster-mounting bezel-to-bezel without interaction.

Self-shielding also minimizes effects of stray magnetic fields. Weight is reduced, too. Because of these important added values, the core-magnetic mechanism has gained industry-wide acceptance. (General Electric pioneered in the development of the core-magnet mechanism.) The superior operating characteristics of BIG LOOK meters—excellent damping, a high torque-to-weight ratio and minimum burden—are the result of continuous progress in development and use of high-quality, modern materials.

A-C PANEL METERS

A-C Mechanism

Uniform Scale obtained from use of an iron-vane repulsion-type mechanism.

Magnetic Damping is utilized to bring the pointer quickly to rest. The damping factor meets or exceeds ASA Spec. C39.1.

Shielding—No iron-vane a-c mechanism is inherently self-shielded. Although no problem for most applications, the following is offered as a guide.

Steel Panel Effect—A magnetic panel has only a slight effect on the particular design of a-c mechanisms used. A nominal change in indication of only ¼ of 1% is caused by a 1/16-inch steel panel. *For such applications, no special calibration is required and we recommend these use of standard stock a-c meters.*

External Magnetic Field – Consideration should be given to effects of external magnetic fields. The degree of effect varies both with the strength of the field and the rating of the meter. Voltmeters are least affected, followed by milliammeters, and low-rated ammeters in that order. For most applications of those ratings, an external shield is not required. However, high-rated self-contained ammeters are particularly affected, and meters in self-contained ratings of 0-20 a-c amp and above, are *furnished with external shields as standard equipment.*

Frequency—60 cycles, unless otherwise noted.

Ammeters—Frequency variations have a negligible effect. The 5-amp rating has an additional error in the order of ¾ of 1% at 400 cycles. *We recommend the use of standard stock ammeters for 400-cycle service.*

Instruments J-B-T Testers

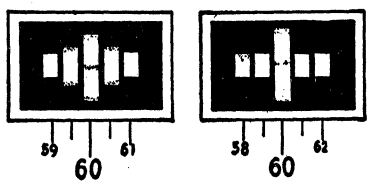
J-B-T INSTRUMENTS, INC.

VIBRATING REED FREQUENCY METERS (PATENTED)

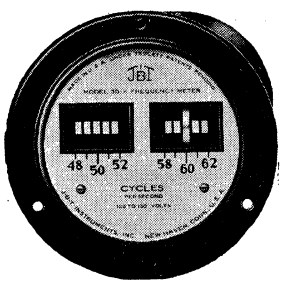
I-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, and television service, on engine generator sets, in laboratories, in many types of electronic equipment, on panel and control boards, in inspection set-ups — wherever constant or known frequency is important to efficient operation of equipment. More than 20 years of continuous experience covering many thousands of these instruments are your assurance of quality for both commercial and defense applications.

The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to but one frequency. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

The response patterns differ with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right.



CAUTION: If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter! Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are accurately calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.



(Meter operating at 60 cycles)

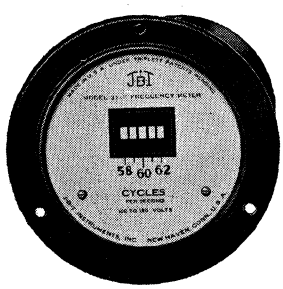
Used on standby power equipment. Handy for accurately measuring frequency of power source. Five reeds, 58-62 cycles, 100-130 volts. Other characteristics same as Model 30-F. See Table of Dimensions, lines 4 and 5. (This meter also is made with 7 reeds).

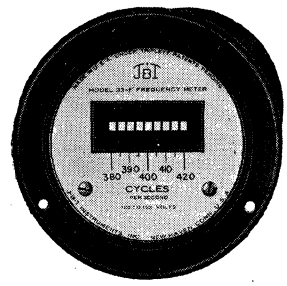
31-F, (illustrated). 58-62 cy., 3¼" Metal Case..... **$26.65**

31-FX, 58-62 cy., 3½" Molded Case, MIL-M-6B mtg..... **$23.65**



ADVANTAGES: Guaranteed accuracy at reference temperature of 77°F is ±0.3% or better of the AC frequency being measured, unless otherwise stated. Accuracy on interrupted DC may be somewhat less. High fatigue safety factor for continuous operation. Temperature compensations are not required as temperature coefficient of reeds is only approximately 75 parts per million per degree F., negative.

All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external magnetic fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.



9 REEDS — 400 CY.

Used for measuring frequency of high-cycle power sources, particularly aircraft. Accuracy ±0.3% at reference temperature. Nine reeds, 380-420 cycle range. 100-130 volts; 90 ohms per volt; 1.5 watts power consumption. Flush panel mounting. See Table of Dimensions, lines 4 and 5.

18 OR 21 REEDS

Advanced design offers 21 reeds as an interchangeable 3½" panel meter with 2-cycle intervals for close reading over the band of 380 to 420 cycles per second. Accuracy ±0.3% at reference temperature. The reed flag size is necessarily smaller than the 9-reed 400-cycle meter, such as the model 33-FX, but the 21 reeds are located in an enlarged window 2" wide with flags 3/32" high x 1/16" wide to give maximum readability. A revised internal construction for mounting the reeds in one clamp assures ruggedness. This instrument and its variations are particularly useful where unusually close indication of frequency throughout the band has not been available heretofore. These meters are not regularly stocked. See Table of Dimensions, line 5.

36-FX-21, (as illustrated). 380-420 cycles, 21 reeds, 28 volts operation, 3½" Molded Case; 18 ohms per volt; 1.6 watts power consumption **$43.75**

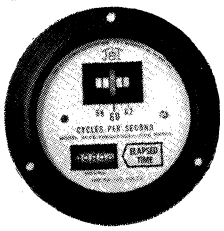
ELAPSED TIME — FREQUENCY METERS



31-FE SERIES. To conserve panel space and centralize information, this panel instrument combines the elapsed time or running time meter with frequency reeds. It is used on motor generator sets and on electrical equipment where maintenance routine calls for periodic servicing. The J-B-T design, proved by years of field experience, uses a separate exciting coil for the reeds to achieve close control of reed amplitude and frequency. Reads 0-9,999.9 hours, and 58-62 cycles with 5 reeds, for 100-130 volt operation; self starting. Tenths shown in red on white, all other numerals in white on black. Black metal case with mounting per Table of Dimensions, line 6. Power consumption is 4.7 watts. For variations having 7, 9, or 11 reeds, not regularly stocked, such as Model 34-FE, see revised print SK-45.

31-FE, 3¼" metal case.....**$33.00**

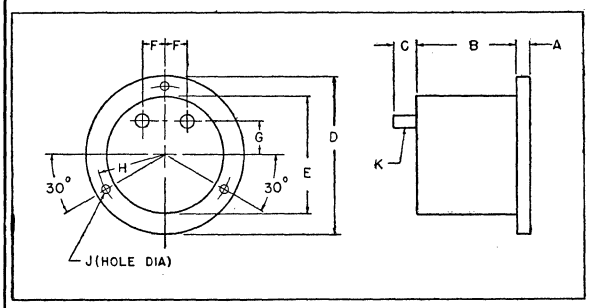
31-FEX-1, (per print SK-44—not regularly stocked) like Model 31-FE, except with 3½" metal flange permanently attached for MIL-M-6A front mounting per line 7, Table of Dimensions.....**$34.10**

RUGGEDIZED METERS

Models with "RUG"—Sealed vibrating reed frequency meters and sealed elapsed time meters can be supplied, on special order, to the intent of MIL-M-10304B which covers ruggedization of other kinds of meters. This feature usually is specified only for extra severe shock and vibration.

400 CYCLES, IN 1 CYCLE STEPS; 800 CYCLES

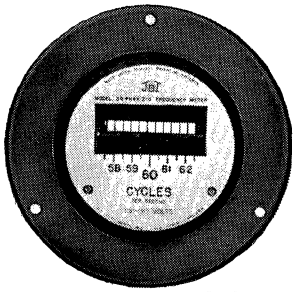
Among the non-catalog variations which J-B-T manufactures on special order, are 21-reed, 390-410 cycles in 3½" case; and 11-reed 780-820 cycles. Quotations on request.



NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made only for the purpose of reading two or more voltages, not additional phases.

3½" SEALED METERS



FHXX TYPE sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters (Print SK-24). While JAN-I-6 and MIL-M-6B (Type MR36) do not refer to frequency indicators, the FHXX series uses the front mounting dimensions, and meets or exceeds the sealing and electrical requirements including the 3000 volt breakdown. Mounting dimensions are shown below. Standard voltage is 100-130. Electrical characteristics and accuracy are the same as for corresponding models without the HXX designation. Every meter tested in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. While not regularly stocked, these meters are in production. For dimensions, see Table, line 8.

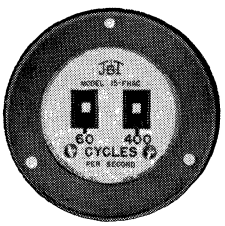
1½" SEALED METERS



MODEL 15-FHAC. Widely used as the frequency standard on audio-oscillators, the model illustrated operates 2 reeds, 60 and 400 cycles, at approximately 8-10 volts on 0.04 watts for a cathode follower circuit. Accuracy ±0.5% at 77°F. Steel case has telephone black finish, solder terminals. Barrel is 1½" diameter; 2-3/32" detachable flange FL-4 covers glass-to-metal seal. See Table of Dimensions, line 1.
15-FHAC **$20.30**

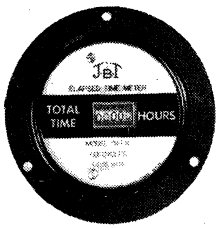
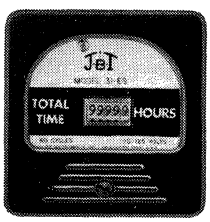
ELAPSED TIME METERS; 4" AND PORTABLE FREQUENCY METERS

ELAPSED (OR RUNNING) TIME METERS — 60 Cycles



MODEL 31-EX. To record operating time of AC electrical and electronic equipment, this self-starting synchronous instrument registers in 1/10th hour steps to 9,999.9 hours, then automatically re-sets. Shows tenths in red numerals on white, all others in white on black. Black molded case matches FX, 3½" frequency meters, and fully encloses all parts. This case, with centered terminals, meets type MR34 or MR35 mounting dimensions of MIL-M-6A, also JAN-I-6. Referring to line 5 of the Table of Dimensions on the preceding page, barrel depth (B) is 2½", stud height above center (G) is zero, and all other measurements are as shown. J-B-T engineers recommend AC elapsed time meters for superior accuracy, especially where voltage or ambient temperatures vary widely. Popular for tube life, TV equipment, punch presses, conveyors, oil burners, maintenance schedules, etc. Types for 99,999 hours, or 50 cycles, or special voltages are available on special order.

31-EX, 60 cy., 110-125 volts **$15.95**
31-EX-200, 60 cy., 230 volts (not regularly stocked)..... **17.05**



MODEL 31-ES. A square black molded case, matching other 3" x 3" meters, differentiates this model from the round 31-EX. Ask for Print SK-110, Rev. D showing standard rear mounting 2¼" bet. centers of molded-in studs, new rugged case with overall depth 3-11/32" behind flange, and electrical studs on center line. APPLIANCE TEMPERATURE TESTERS

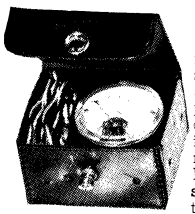
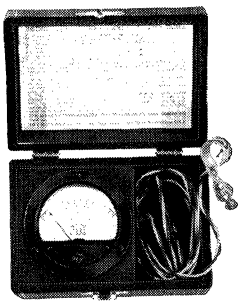
OVEN TESTERS



MODEL 23-JP-1. This popular model indicating portable pyrometer saves time and furnishes reliable information in testing and setting thermostats on electric or gas ranges and other appliances by showing oven temperatures as they change. Standard size dial, 0-650°F., with 2⅜" scale arc reading, is used but covered by clear-plastic instrument front. The indicator is mounted on a black metal panel affixed inside a pocket-sized, black top-grain leather case 4½" x 2⅞" x 4¼" over hardware. Characteristic of more expensive pyrometers, the 23-JP-1 is automatically compensated for ambient temperature. Thus the tester eliminates calculations, avoids likelihood of serious error as temperature change inside the instrument itself, and gives foolproof direct readings. Supplied with attached SA-116 5½' calibrated thermocouple clip, and convection shield **$26.00**



MODEL 32-JP-3. This time-tested model uses a rigid outer carrying case 6" x 3⅞" x 3¾", covered in black leatherette. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2½° on a 2⅜" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116 5½' thermocouple, clip for attaching to grill and convection shield included..**$28.00**

NEW

MODEL 32-JP-7. Most versatile and easiest to read of the oven temperature testers, Model 32-JP-7 offers a 0-650°F scale more than 4" long. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5½' thermocouple with attachment clip and convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., appropriate extra thermocouples are suggested. FIRST ELECTRONIC COUNTER IN KIT FORM

NEW! MODEL 801 DIGITAL READOUT ELECTRONIC COUNTER

A precision laboratory instrument in kit form, offering features heretofore found in wired instruments costing at least $450 more. The 801 will count any phenomenon occurring periodically or at random intervals. The 801 reads directly in cps, rps and cycles per tenth of a second. The display time is variable and the instrument has a frequency response from 1 cycle to 1.2 megacycles with an accuracy of ± 1 count ± 0.1%. (Accuracy of ± 1 count ± .01% with optional crystal.) Input minimum is .2 volts rms and the input attenator may be adjusted to inputs up to 100 volts rms. Input impedance is 1 megohm shunted by 50 uufd. The 801 is ruggedly built and beautifully styled. It is easily operated with carefully engineered controls and circuitry which employs only brand - name components operated at their design center. The 801 counter measures frequency, or random events per unit of time. With suitable transducers and calibration the 801 also measures rps, speed, rpm, weight, pressure, temperature, etc.

It is portable for on-the-spot-measurements.

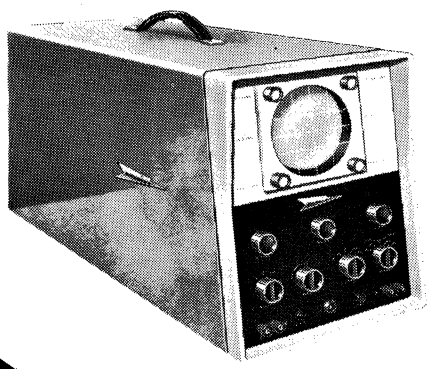
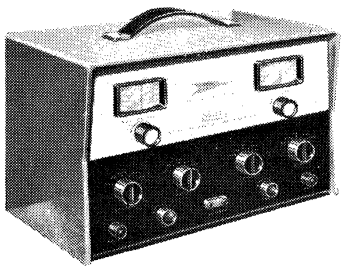
MODEL 911



MODEL 3153

MODEL 302



MODEL 632

PRECISE MODEL 911 VTVM No surplus components—only brand name precision ceramic and wirewound resistors, transformers which feel cool to the touch, permanently etched panels, rugged steel cabinets. In addition to offering overlapping +DC and —DC voltage ranges, from 5 volts full scale to 1000 volts full scale, the 911 will accurately measure the .2 ohm resistance of a dead short as well as cable insulation resistance of one billion ohms or more. AC voltages from 5 volts full scale to 1000 volts full scale can be measured and a db scale from —20 to 55 is provided.

The 911 does not load the circuit; its DC input resistance is 25 megohms, while its AC impedance is approximately 3.5 megohms. The 911 comes with a zero alignment scale for FM and TV discriminators, a 4½" meter in a burn-out proof circuit, test leads and internal battery. With the Precise 912 probe, the frequency response of the 911 may be extended to 250 megacycles. The Precise 999 high-voltage probe allows the 911 to be used up to 30,000 volts.

NEW! MODEL 3153 — 5" COLOR OSCILLOSCOPE The only reasonably priced wide band oscilloscope which offers flat response up to 5 megacycles. Useful response to beyond 9 megacycles. It is the only professional oscilloscope in the $100 range which offers these precision laboratory features:

Push-pull horizontal and vertical amplifiers—5CP1 cathode ray tube with post acceleration—frequency-compensated stepping attenuators in both vertical and horizontal circuits protect the input signal from wave distortion. Vertical sensitivity is 10 millivolts per cm. Horizontal amplifiers are within ± 6 db through 500 KC. and have a sensitivity of approximately 50 millivolts per cm. Cathode follower assures linear horizontal trace. A full complement of all standard oscilloscope controls, plus an astigmatism control, an intensity on-off switch, and a focus stand-by switch are included.

NEW! MODEL 302 7" WIDE BAND COLOR OSCILLOSCOPE It features direct-coupled push-pull horizontal and vertical amplifiers from input through output. Frequency response flat from DC to 5 megacycles with a vertical sensitivity of 3.94 millivolts per cm. Frequency-compensated stepping attenuators in both vertical and horizontal circuits protect the input signal from wave distortion. Constant impedance push-pull input which is easily converted to single-ended or reverse phase input. Electronic internal input mixing. Bridge-type beam positioning does not vary the characteristics of the medium persistence 7VF1 cathode ray tube which is supplied. The internal return trace is blanked, the external return trace is not blanked and 60-cycle or 120-cycle blanking is supplied by the blanking amplifier. Driven or non-driven linear sweeping rates are offered from 1 cycle to 30 KC in five ranges. Electronic magnification allows any portion of the signal to be enlarged up to 10 times—equivalent to 70 inches of horizontal deflection. An internal square wave calibrating potentiometer makes the 302 oscilloscope a precision VTVM for peak-to-peak measurements. Deflection plates are brought out at the rear of the cabinet and intensity modulation is offered through a Z-modulation amplifier.

The low-loss components, especially the transformers, are all operated well below their ratings. The oscilloscope has an edge illuminated scale with filtered screen and comes in a rugged steel cabinet with deeply etched aluminum panel. A demodulator probe (Precise Model 9127 (MM) and a capacity attenuator probe (Precise Model 960) are available as accessories.

NEW! MODEL 632 RF-AF-TV MARKER GENERATOR Offers frequencies up to 110 megacycles on fundamentals (to 330 megacycles on harmonics). The generator's audio range covers 20 to 20,000 cycles with variable modulation level and low impedance cathode follower output. The audio oscillator utilizes a Wien bridge circuit while the RF oscillator employs a Colpitts circuit. The Model 632 Marker Generator has many additional unique features specifically engineered for the serviceman's requirements. These include precision individually tuned coils, accurate non-slipping vernier tuning on the RF and AF range, complete shielding, drum dials and coaxial fittings. The economically priced Model 632 uses no surplus parts and all components are operated within wide safety margins.

Note: Factory preassembled and calibrated RF head available at slight additional cost.

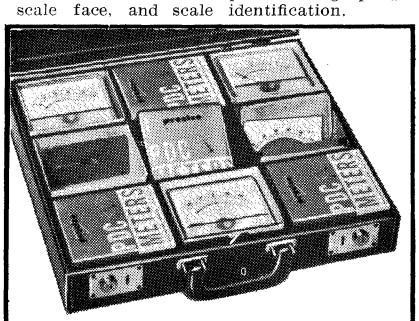
PRECISE BRINGS UNLIMITED FLEXIBILITY TO METERS

Special interchangeable slip-on scales, and companion snap-in shunts and multipliers, add to the ranges that may be covered with six basic meters.

HERE'S HOW IT WORKS. Let's say you have a 15-volt, 20,000 ohms-per-volt meter, and you need a 2.5 volt, 20,000 ohms-per-volt meter for another application. All you do is to take the same 15-volt, 20,000 ohms/volt meter, open the case, slip out the interchangeable scale face, pull out the resistor in the rear . . . and then slip on a 2.5 scale face, snap in its companion multiplier into the lock-type jaws in the rear . . . and snap the cover back in place . . . and IN LESS THAN A MINUTE YOU HAVE A NEW CUSTOM METER—professionally accurate, perfectly calibrated custom meter with a special lithographed scale face, and scale identification.



SPECIAL PRECISE PDC METER PACKAGE

Here's a special introductory package from PRECISE, one which will provide you with complete coverage of all the ranges indicated above.

YOU GET: ● Six Meter Movements ● Interchangeable Scale Faces ● Shunts and Multipliers ● Illumination Packet ● Beautiful Attache-type Case ● Meter Master Chart

WR-64A COLOR-BAR/DOT/CROSSHATCH GENERATOR

$189.50*

Complete with RF output cable, cable-carrying bracket attachment and instruction booklet.

**User Price (Optional)*

For checking over-all operation of Color-TV receivers. A "must" for adjusting and trouble-shooting color phasing and matrixing circuits. Generates signals for producing ten bars of different colors simultaneously. Also provides extremely stable fine-line crosshatch and dot patterns free from "jitter" and "crawl". Fixed number of bars and dots facilitate adjustment of over-scan (height and width) and linearity in both color and black-and-white sets.

The Color-Bar and Dot/Crosshatch generating functions require no external sync connections. All three patterns are RF outputs, factory set to channel 3 (can be set to channel 4). A sound carrier is provided to permit accurate adjustment of the fine-tuning control on the receiver.

The WR-64A features a chroma control helpful in checking color sync lock and color AFC alignment. The color sub-carrier frequency, the horizontal sync-pulse frequency, and the "bar" frequency are all crystal controlled. A shielded output cable is provided with the instrument. Width 13½", Height 10", Depth 7½". Weight only 13 pounds.

Shurite®
PANEL METERS

SHURITE Meters are attractive, rugged, dependable instruments with accuracy well within ±5%, and have the ability to duplicate readings. DC meters are polarized-vane solenoid type, or moving-magnet construction when indicated; AC meters are double vane repulsion type with jeweled bearing. The jewel construction costs more to build, but it pays off by providing continuing accuracy during a longer useful life. All models fit 2 5/32" hole, and Model 850 also fits any smaller size down to 2 1/16". All are guaranteed. . . . **0-1 D.C. MILLIAMPERES.** Sensitive-type meters such as stock Nos. 9300Z or 8300Z, 0-1 D.C. Ma. with approximately 1000 ohms internal resistance, and stock Nos. 9332Z and 8332Z, 0-3 D.C. Ma., 500 ohms internal resistance, are specified in many circuits. Volume production makes moderate prices possible.

CLEAR PLASTIC INSTRUMENTS

Now number one in popularity, the 850 Series dresses up panels and retains the characteristically sturdy construction of the Shurite metal-cased 550 and 950 Series. The 850 snap-on front of crystal polystyrene 2 17/32" wide x 2 5/16" high, admits light from all sides and accentuates the appearance of the scale arc which is the longest in its field. The case back, with interior frosted finish, is molded of the same material to provide weight reduction and superior insulation.

NEW VU METER. To measure volume levels in audio transmission circuits; 850 Series case; range —20 to +3 VU, red and black scale; AC rectifier type; pointer normally at —20 VU; standard ±5% accuracy; zero adjuster included; see Bulletin VUS-61 for application circuitry; meter illustrated above.

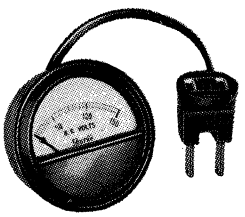
HANDY AC-DC LINE VOLTAGE TESTER



Stock 5406-LT—To use this highly popular line tester, push in the plug and read line voltage, then plug in the TV set, iron, toaster, washer, air-conditioner, or other appliance, and note the new reading. Find (and demonstrate) voltage drop or inadequate wiring. Cord is permanently attached to metal-cased meter which tests single outlets without accessories. Range 0-150 Volts. Standard package of 6 individually boxed meters includes attractive counter display at no extra charge. Per meter **$4.10**

IMPORTANT — HOW TO ORDER

For all standard models, give (1) Model Number, (2) Range, (3) Stock Number. If Model number and stock number are not stated, Model 550 will be supplied.

ZERO ADJUSTERS (Z) For DC meters, zero-adjusters are available only on Models 550, 950 and 850. For AC meters, zero adjusters are available on Model 850. When ordering, add Z to stock number. Example: Model 550-DC voltmeter, 0-1 volt range without zero adjuster is 5101. With zero adjuster, it is 5101Z. Add 35c to price.

PANEL CALIBRATION (S) Meters are calibrated for non-magnetic panels. If for magnetic (steel) panel mounting, specify thickness and overall size of panel, and add -S to stock number when ordering, as 5101-S.

VISCOSITY DAMPING Careful application of new silicone compound on bearing surfaces damps pointer overtravel.

SEE YOUR DISTRIBUTOR Besides carrying most types, and being able to obtain your other needs promptly, your authorized Shurite distributor of electronic parts is qualified to suggest the right meter for your need.

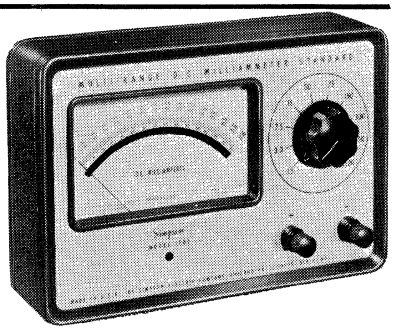
MADE TO CONFORM TO ASA C-39.1-1959



DC VOLTMETER
Model 1700 ..... $160

DC MILLIAMMETER
Model 1702 ..... $135

Simpson introduces a new line of laboratory standards for general industrial laboratory testing, plant incoming inspection, production line applications and for high school and college laboratories.

These standards feature Simpson's self shielding deep core construction with spring mounted sapphire jewels and hardened steel pivots. This feature ensures the high degree of accuracy built into each standard. The combination of the self shielded core magnet meter movement and the steel case make these instruments impervious to the effects of external fields.

The meter is temperature compensated from 15° C. to 35° C. Hand stepped, hand drawn, white enameled dial with mirror segment assures greater accuracy over the entire scale arc. Tubular aluminum knife-edge pointer (painted black on top side only) improves readability, eliminates parallax.

These portable, multi-range standards are available from your industrial electronic distributor. Request him to arrange a demonstration today.

WIDE-VUE PANEL METERS

2½", 3½", 4½"

Modern styling with durable, open face plastic cover for wide-angle readability and protection of meter face; permits longer scales. Black, one-piece wrap-around cover is made of methyl methacrylate. Black bakelite case on 2½" and 3½" models; lucite case on 4½" units. DC meters have self-shielded core magnet movements except 0-25 and 0-50 microammeters and VU meters, which are external magnet type. AC meters have moving vane type movement. Accuracy is 2% except Models 1347C and 1349C, 5%. All are calibrated for nonmagnetic panels; for steel panels, state panel thickness and add $1.65 to prices shown.

Models 1227C and 1257 — 2½" meters require 2.17" dia. hole; four mounting studs on 1.88" centers. Scale length 2.36".

Models 1327C, 1347C and 1357 — 3½" meters require 2.73" dia. hole; four mounting studs on 2.24" centers. Scale 3.14" long.

Models 1329C, 1349C and 1359 — 4½" meters secure 2.75" dia. hole; four mounting studs on 4" x 3.56" centers. Scale length, 3.93".

CALIBRATION AND DIALS — All DC Wide-Vue meters listed below have the Simpson self-shielded core-type movement (Calibration not affected by stray magnetic fields), except 0-15, 0-25, 0-50, 25-0-25 DC Microammeters and VU Meters which have the Simpson external magnet type movement. All AC Wide-Vue meters have the Simpson Iron-vane type movement. When ordering external magnet meters to be used on steel panels, state the panel thickness and add $1.65 to list price shown below for recalibration. AC Milliammeters and Ammeters are calibrated for use on 25 through 800 cps; AC Voltmeters for use on 25 through 125 cps. For other specified frequencies add $1.65 to the list price.

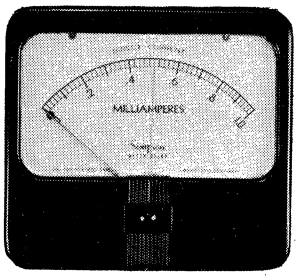
NEW 4½" METER RELAY—FRONT ADJUSTABLE—MODEL 29XA



GENERAL: Model 29XA Relays are of the D'Arsonval Type. Externally adjusted limit setting contacts are non-locking and intended for circuits with external locking provisions or for light duty non-locking applications.

CALIBRATION: Accuracies ± 2% of full scale.

CONTACTS: Platinum Alloy. For use @ 15 volts DC @ 10 milliamperes maximum on resistive or diode protected inductive loads.

CONTACT ADJUSTMENT: Contacts are externally adjustable over 95° of 100° scale arc, and within 5° of each other. The pointer will indicate the contact make position within 2° of actual contact intercept.

CONTACT DIFFERENTIAL: Normally, contacts will close within 2% of full scale value and break within 10% of full scale value.

INSULATION: Breakdown 300 volts AC from Relay contacts to meter circuit. 3 KV AC from Relay terminals to mounting panel. (All Tests at 60 cycles.)

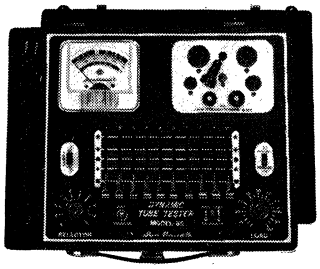
SUPERIOR TEST EQUIPMENT

New Model 85 — *a DYNAMIC type*

TRANS-CONDUCTANCE TUBE TESTER

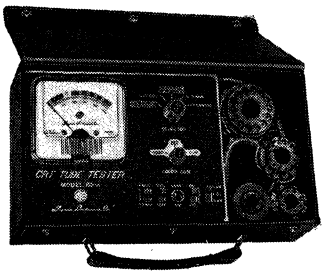


- Employs latest improved TRANS-CONDUCTANCE circuit. Tests tubes under "dynamic" (simulated) operating conditions. An in-phase signal is impressed on the input section of a tube and the resultant plate current change is measured as a function of tube quality. This provides the most suitable method of simulating the manner in which tubes actually operate in radio, TV receivers, amplifiers and other circuits. Amplification factor, plate resistance and cathode emission are all correlated in one meter reading.
- SYMBOL REFERENCES: for the first time ever in a trans-conductance tube tester, Model 85 employs time-saving symbols (★, +, ●, ▲, ■,) in place of difficult-to-remember letters previously used. Repeated time studies proved to us that use of these scientifically selected symbols speeded up the element switching step. As the tube manufacturers increase the release of new tube types, this time-saving feature becomes more necessary and advantageous.
- THE "FREE-POINT" LEVER TYPE ELEMENT SWITCH ASSEMBLY marked according to RETMA basing, permits application of test voltages to any of the elements of the tube.
- NEW IMPROVED TYPE METER with sealed air-damping chamber provides accurate, vibrationless readings.
- FREE FIVE (5) YEAR CHART DATA SERVICE. The chart provided with Model 85 includes easy-to-read listings for over 1,000 modern tube types. Revised up-to-date subsequent charts will be mailed to all Model 85 purchasers at no charge for a period of five years after date of purchase.
- SPRING RETURN SAFETY SWITCH guards Model 85 against burn-out if tube under test is "shorted."
- AN ULTRA-SENSITIVE CIRCUIT is used to test for shorts and leakages up to 5 megohms between all tube elements.

Model 85 comes complete, housed in a handsome portable cabinet with slip-on cover. Only **$52.50**

New Model 83A

C. R. T. TESTER



Tests and Rejuvenates
ALL PICTURE TUBES
ALL BLACK AND WHITE TUBES

From 50 degree to 110 degree types—from 8" to 30" types.

ALL COLOR TUBES

Test ALL picture tubes—in the carton out of the carton—in the set!

- Model 83A is not simply a rehashed black and white C.R.T. Tester with a color adapter added. Model 83A employs a new improved circuit designed specifically to test the older type black and white tubes, the newer type black and white tubes and all color picture tubes.
- Model 83A provides separate filament operating voltages for the older 6.3 types and the newer 8.4 types.
- Model 83A employs a 4" air-damped meter with quality and calibrated scales.
- Model 83A properly tests the red, green and blue sections of color tubes individually—for each section of a color tube contains its own filament, plate, grid and cathode.
- Model 83A will detect tubes which are apparently good but require rejuvenation. Such tubes will provide a picture seemingly good but lacking in proper definition, contrast and focus. To test for such malfunction, you simply press the rej. switch of Model 83A. If the tube is weakening, the meter reading will indicate the condition.
- Rejuvenation of picture tubes is not simply a matter of applying a high voltage to the filament. Such voltages improperly applied can strip the cathode of the oxide coating essential for proper emission. The Model 83A applies a selective low voltage uniformly to assure increased life with no danger of cathode damage.

Model 83A comes housed in handsome portable Saddle Stitched Texon case — complete with sockets for all black and white and all color tubes. Only **$38.50**

TCA-1 TRANSFARAD*

THE FIRST ANALYZER SPECIFICALLY DESIGNED TO SAFELY TEST TRANSISTOR CIRCUIT CAPACITORS

The Sprague TCA-1 is specifically designed to safely test capacitors such as tantalum capacitors, low-leakage aluminum electrolytic miniatures, low voltage ceramics and low voltage paper and film capacitors used in transistor and other low voltage circuits. No industrial laboratory or modern electronic service shop can afford to be without one!

MODEL TCA-1 TRANSFARAD 115 VAC/60 cy.....$197.50 net

- **CAPACITANCE BRIDGE** measures 1 $\mu\mu$F to 2000 μF in five overlapping ranges. Only 0.5 volt is applied to the bridge from a continuously adjustable power supply. The voltage across the capacitor is less than this applied voltage, the amplitude depending on the capacitance being measured. No possibility of overheating or deforming *any* low voltage capacitor during measurements.
- **INSULATION RESISTANCE** directly read from 50 megohms to 20,000 megohms. Only 25v d-c is applied, permitting measurements on low voltage ceramic, mica, and film capacitors. IR of ceramics rated below 25v may be calculated from leakage current measurements at exact rated voltage.
- **LEAKAGE CURRENT** measured directly on meter at exact rated d-c voltage of capacitor. Sensitive circuit makes full scale measurements from 0.6 μa to 600 μa in seven ranges.
- **POWER FACTOR** measured by Wien bridge from 0 to 50 per cent.
- **MAGIC EYE** null detector in high-gain amplifier has sensitivity control permitting accurate measurement of small capacitors.
- **SHORT-TIME STABILITY** is assured by dual regulation of the power supply. Specially processed etched circuits and complete encapsulation of the critical bridge-null amplifier insure long-time stability.
- **BINDING POSTS** are shielded against strays, assuring greater accuracy during low capacitance measurements.
- **FOR SAFETY** the capacitor under test is automatically discharged after testing. Three-wire line cord grounds instrument case.
- **OPERATING PROCEDURES** are clearly shown on convenient pull-out slide.

MODEL TCA-1RM FOR RACK MOUNTING

Electrically identical with the standard instrument, Model TCA-1RM has a standard 19" w. x 10½" h. panel so that it can be mounted in the conventional relay rack.

RUGGEDIZED INSTRUMENTS

A complete line of 2½" and 3½" ruggedized and sealed instruments designed to meet government specification MIL-M-10304A.

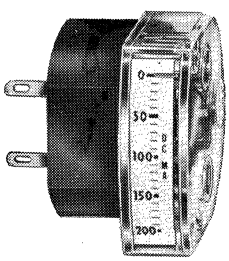
Triplett ruggedized instruments employ the unique and exclusive bar-ring construction so well adapted to ruggedization, that the addition of spring loaded jewels and an internal rubber mount (both designed for jewel protection) constitute the essential difference between the commercial and ruggedized movements.

The bar-ring construction is inherently self-shielding so that the heavy steel case does not affect instrument calibration nor does mounting in a steel panel of any thickness.

The unusually strong housing consists of a drawn steel case with heavy die cast window bezel. The bezel seals the window to the case with a simple gasket and screws. A tough plastic window is used instead of glass.

Husky gasket-sealed studs are used for electrical connections to provide additional protection over delicate glass sealed types.

Most catalog ranges of DC: MV, Volts, Mic. Ma, Amp and AC rectifier type can be supplied. Regular dials in accordance with MIL-M-10304A are supplied although special dials of all descriptions can be made up for special applications.



MINIATURE EDGEWISE PANEL INSTRUMENTS

If space on your panel is at a premium here is a miniature meter that will fit into even the most restricted area—yet give you the readability, performance and reliability you expect from the conventional 2½" sizes.

Weighing only four ounces this meter also is of value to the user who has a weight limitation factor on his hands.

Accuracy—DC 2% of full scale; AC Rectifier type 5% of full scale.

Self-Shielded Bar-Ring Magnet—Not affected by magnetic panels. High torque, exceedingly rugged and accurate.

Mounting—Horizontal, zero at left and barrel down Is standard.

Vertical mounting or other special adaptations in quantity orders.

Panel Hole Required—Only 5/16" x 1 1/16".

WESTON INSTRUMENTS

The CROWN SERIES
distinguished by handsome, functional design

Weston's Crown Line represents the ultimate in meter design, performance and readability. Their striking cases will enhance the most modern panels or electronic equipment.

Scales are exceptionally long for the case diameters: up to 2.5 inches for the 2.5-inch models. Ballistic characteristics are greatly improved.

Clear plastic covers and exceptionally long scales afford unmatched readability, with excellent natural illumination from top, front and sides. Confusing shadows are eliminated. In poorly lighted areas, one bulb mounted above the instrument furnishes adequate illumination. The neutral tone of the multi-prism front is designed to complement test equipment or panels of any color. CORMAG® mechanisms eliminate the need for external shielding; they can be closely grouped on magnetic or nonmagnetic panels without special adjustments or danger of intereffects.

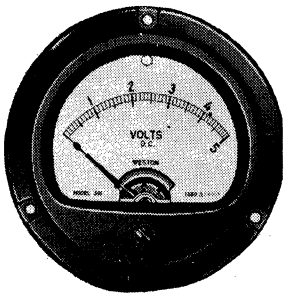
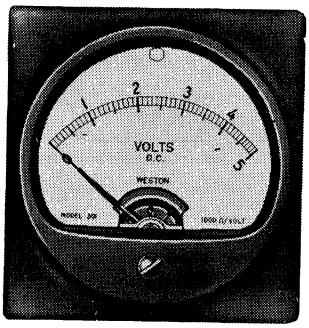
WESTON INSTRUMENTS

201/301 PANEL INSTRUMENT SERIES





The Weston 301 Line—famous and trusted throughout industry for many years—has undergone important changes. The 3½-inch instruments look different, are more versatile, work better and longer. And now a sister line of 2½-inch instruments has been introduced—the 201 Group—matching the 301 instruments in appearance and incorporating the same new features.

The renowned Weston CORMAG® mechanism is now standard equipment . . . permits mounting on magnetic or nonmagnetic panels, close to other instruments, without special adjustments. It makes the "301" and "201" immune to the effects of stray magnetic fields. Ballistic characteristics are improved; even critical damping can be obtained. New, modernistically styled Bakelite cases—round or rectangular—are standard. These cases are interchangeable for A.C. and D.C. models.

MARK II ANALYZER

Model 980 Mark II

Price $49.50

Combination protective front cover and tilt stand $5.50

The new thin-line Mark II is a highly sensitive and extremely rugged volt-ohm-milliammeter designed for a wide range of accurate test measurements in the electronic field.

Famous CORMAG® mechanism protects the instrument against false readings due to magnetic disturbances. Electrostatic shielding assures accurate measurements at high d-c voltages. Fuses in the low ohmmeter circuits prevent burnout if voltages are mistakenly applied. Interchangeable parts eliminate all need for parts selection in the event replacements are ever necessary. The breakproof case will withstand dropping and thus eliminate the major source of repair and maintenance costs.

FEATURES

- Modern Thin-Line Design
- Spring Back Jewels for Maximum Shock Resistance
- Fused Resistance Ranges
- Transit Switch Position to Dampen Movement During Transportation
- Fully Insulated Crackproof Case
- Single Selector Knob for all Functions and Ranges
- Wide Angle Scale for Maximum Visibility
- Precision Components—No Parts Selection Required
- Single Board Etched Wiring Circuit for Easy Maintenance
- Static Shielded for Accurate High Voltage Measurement
- 4-Way Combination Tilt Stand and Protective Cover Available

WESTON INSTRUMENTS

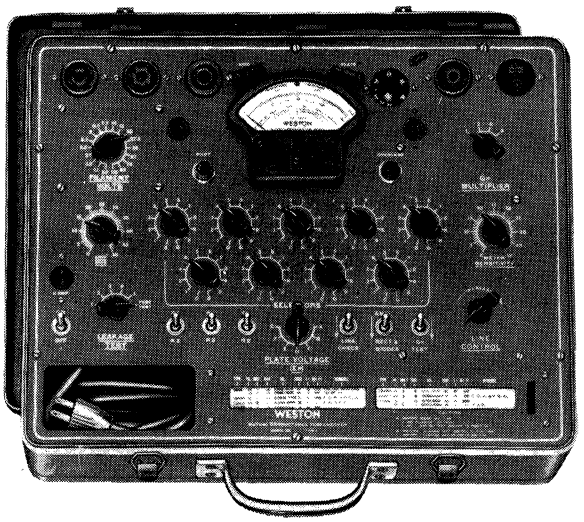
WESTON MODEL 981 PROPORTIONAL MUTUAL CONDUCTANCE TUBECHECKER



FEATURES

METER MEASUREMENT OF HIGH LEAKAGE RESISTANCE: Provides an accurate meter measurement of leakage resistance as high as 5 megohms between tube elements, thus being particularly useful for TV servicing and TV line production assembly.

MULTIPLE SWITCHING FACILITIES: Protection against obsolescence is assured through the use of nine single circuit, twelve position, selector switches.

TWIN SECTION TUBES: Three toggle switches make it possible to rapidly check and compare the respective sections of twin section tubes at only one setting of the selector switches.

SINGLE SOCKET FOR EACH TUBE BASE REGARDLESS OF TUBE CONNECTION: Eliminates the possibility of plugging a tube into the wrong socket.

Gm MEASUREMENTS: Gm measurements are made more accurately by using filtered d-c plate, screen grid and control grid potentials. A precision voltage divider network and selector switch allows a proportionate value of signal voltage to be chosen for testing tubes having transconductances up to 30,000 micromhos. Signal voltages of 5.2, 2.6, 1.3, and 0.65 volts peak-to-peak having a frequency of 5000 cycles are provided.

ROLL INDEX CHART—A complete listing of tube test data is available at the flick of a finger by means of an easy-to-read, built-in roll chart.

LEAKAGE TEST: The leakage tests are performed at a d-c potential of 125 volts. For each numbered position of the LEAKAGE TEST switch, a specific tube element is isolated and connected into a series ohmmeter circuit consisting of the isolated element, the 125 volt d-c potential, a current limiting resistor, a milliammeter, and all other elements of the tube.

VOLTAGE REGULATOR TUBES: A selenium rectifier supply furnishes 200 volts d-c for testing of voltage regulator tubes.

SUBMINIATURE TYPE TUBES: A 45 volt potential source facilitates testing of subminiature tubes.

SPECIFICATIONS

FILAMENT VOLTAGES: .65, 1.1, 1.5, 2, 2.5, 0.6a, 3.3, 5, 6.3, 7.5, 10, 13, 20, 27.5, 35, 47, 70, 115.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

SLO-SYN® Synchronous Motors

- **INSTANT STARTING; STOPPING, REVERSING**
- **72 RPM SHAFT SPEED WITHOUT GEARS**
- **CAN BE USED AS D-C STEPPING MOTORS**
- **START AT FULL RATED TORQUE**

A SLO-SYN Synchronous Motor is a permanent magnet type a-c motor having instant start, stop and reverse characteristics and a basic shaft speed of 72 RPM with 60 cycles applied. Adaptable for use as a d-c stepping motor or incremental positioning device that can be stepped 200 times per revolution of the motor shaft. Compact and economical, has almost negligible overshoot, no ratchets or detents. A single-pole, three-position switch can give complete forward, reverse and "off" control because the motor has three leads only. Starts or stops in less than 0.025 second or approximately 1.5 cycles. No need for mechanical or electrical braking; stops in less than 5° of motor shaft rotation. Starting and operating currents are nearly identical; no excessive inrush current when motor is turned on. All types have lubricated-for-life bearings.

PLANETARY GEAR TYPES

Standard types having specially-designed planetary gear assemblies are available. The speed reduction assembly is completely enclosed in a dust proof housing mounted on the shaft end of the motor. The load is evenly distributed over three nylon gears thereby reducing the possibility of tooth damage. The self-lubricated nylon gears provide quiet operation and long life. The planetary gear shaft is ball bearing mounted. When ordering, the basic type number must be suffixed with the desired planetary gear assembly number. For example, type SS50-Pl.

SLO-SYN® *Translator*

SLO-SYN Translator type ST-150 is a pulse-to-step converter designed for use with bifilar SLO-SYN Synchronous Motor types SS50-1009 and SS150-1010. It converts low-level signal pulses or square waves into the correct switching sequence needed to drive the SLO-SYN motor at 200 discrete steps per revolution. Internal power supply allows alternate operation from an external shorting switch if desired. Power input is 120 volts a-c, 0.5 ampere. SLO-SYN Translators are used in programmed positioning, remote positioning, indexing and indicating applications.

GLASS TO METAL HERMETICALLY SEALED CELLS

Powermaster Photocells are useful in any application where an operation must be controlled by variations of illumination. They are highly stable light-controlled variable resistors; the slightest variation in light intensity reaching the sensitive layer causes the resistance to change, thereby altering current flow and permitting the cell to act as a light activated switch. The types shown here are typical of the many photocells now offered in production quantities.

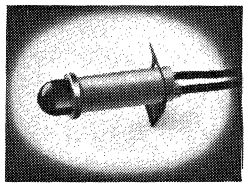
OMNI-GLOW PILOT LIGHT



For use on instrument panels, appliances, switchboards, all electrical and electronic apparatus, OMNI-GLOW will last in excess of 10,000 to 25,000 hours of operating life.

With built-in glow lamp and current limiting resistor, all mechanical spring contacts are eliminated, providing a cost-saving, rugged unit relatively free from failure due to vibration or shock.

Easy mounting — only a ½" hole required for any panel thickness. Instant fastening — speed nut assures permanent shock and vibration-proof attachment.

Drawing less than 1/10 watt at 115 volts, long life, high reliability operation is provided over the 75-150 volt range; can also be used at higher voltage with decreased life.

Nylon body and acrylic lens assembly is 1 13/16" long overall. Lens extends 7/32" in front of panel. Black plastic (105°C) leads are 4½" long, stripped and tinned ½".

Four standard models have red (Model #1010A1), clear (Model #1010A2), amber (Model #1010A3), or white translucent (Model #1010A4) lenses.

Furnished complete with lamp and speed nut, OMNI-GLOW is UL approved—CSA Approval No. 13346.

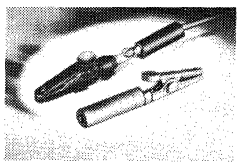
SAFE-T-KLIP

(U. S. Patent 2,754,490)



New convenience and safety are realized through the use of 100% insulation on these test clips. Tough nylon insulation covers the entire clip, including the nose, without the bulkiness of rubber boots or insulating tape. Danger of short circuit due to clips touching each other or other components is eliminated, and test leads may be changed from one connection to another without cutting the power in the equipment.

Available in pairs (one red, one black) SAFE-T-KLIP incorporates a cadmium plated steel alligator clip and provides shock-proof, short-circuit proof operation in excess of 600 volts. Width of the clips is ⅜"; maximum height is ⅝".

Four models are available. The #1410A is for use with a wire lead and provides either a soldered or screw terminal connection. The nylon sleeve is threaded to the clip for easy connection: Overall assembled length is 2 13/16". The #1410B, with overall length of 2 11/32", provides positive clip connection to all standard (.081 dia.) phone-tip test prods. The #1410C has a jack for standard banana plugs and an overall length of 2 1/16".

The 1410D is similar to 1410B except that the entrance hole is modified for Signal Corps. application.

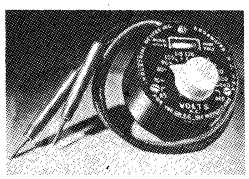
MINI-VOLT VOLTMETER

(U.S. Pat. 2,644,134)



MINI-VOLT is an "abuse-proof" voltmeter, sufficiently accurate to indicate a 2 or 3 volt drop on 110 volt line. Virtually burn-out proof, this rugged unit is used by electricians, radio and TV repairmen, refrigeratior and air conditioning servicemen, experimentors, lab technicians, handymen.

MINI-VOLT has wide application for all equipment whose proper operation requires correct voltage.

In addition to measuring the exact voltage over the range from 65 to 660 volts, Model #400B is used to identify AC or DC lines, check rectifiers, filter capacitors, chokes; test for blown fuses, grounded components, DC polarity, measure voltage drops with load, and 1001 other uses.

For use on AC (any frequency) or DC, MINI-VOLT, with an impedance of approximately ½ megohm, draws negligible current and can therefore provide dependable voltage readings even on circuits used in electronic apparatus.

Will provide a lifetime of service — glow lamp is guaranteed for 25,000 hours of actual operation. Furnished complete with extra-heavy insulated 12-inch flexible test leads and test prods.

Lightweight impact resistant case and dial panel, thoroughly insulated. So rugged that instrument can be thrown into tool box or dropped to floor without damage. C.S.A. approval #8910.

ATR EMERGENCY LIGHTING AND POWER UNITS

Completely Automatic Standby-Power Units Specially Designed to Permit the Instantaneous Continued Operation of Critical Lighting Equipment, PA Systems, Amplifiers, Intercom Systems, Burglar Alarms, Fire Alarms, Synchronous Electric Clocks, Electric Time and Recording Clocks, Incubators, Gas Valves, Telephone and Test Equipment, and Similar Critical Devices in the Event of 115 Volt AC Commercial Power Line Failure. For Use: In Hospitals, Banks, Hotels, Theatres, Factories, Office Buildings, Schools, Homes, and Many Other Areas of Operation.

ATR Emergency Lighting and Power Units are actually a combination of an ATR Inverter, automatic Battery Charger, and transfer panel. These Emergency Standby-Power Units are especially recommended for applications as mentioned above and feature RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector. ATR Emergency Lighting and Power Units provide instantaneous operation of the equipment being protected, within approximately 1/20th of a second. They are designed for quiet long life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in type Inverter Vibrators. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for the power load being protected. These Inverters are recommended for use only with loads having power factors in excess of 70%. Additional external power factor correction is required in order to operate lower power factor loads as low as 50%.

The ATR Charger portion is completely automatic and will maintain the storage battery at full charge, with minimum gassing, from regular 115-volt AC 60 cycle power line. In the event of power line failure, the storage battery, which has been kept fully charged for this purpose from the regular power line, is connected automatically to the lamps, or to the Inverter, or both. The Inverter then supplies power automatically to the load being protected. When the commercial power is restored, the transfer unit, automatically switches the "protected load" to commercial power and turns the Inverter and lights off. At this point, depending on the state of charge of the battery, the battery charger will deliver approximately 6-3 amperes to a 6-volt battery (or less to a 12-volt battery) for fast recharging. As soon as battery reaches full charge, the charger will automatically switch to a trickle charge of 100-150 milliamperes (adjustable) to maintain this full charge.

ATR UNIVERSAL INVERTERS

Specially Designed for Operating Standard A.C. Tape Recorder, Television Set, Dictating Machine, Radio Set, Ham Gear, Public Address System, Amplifier, Record Player, Electric Razor, Food Mixer, Vacuum Cleaner, Sewing Machine, Business Machine, Electric Drill, Fluorescent and Incandescent Lamp, and Electronic Test Equipment from D.C. Voltages in Automobiles, Buses, Trucks, Boats, Trains, Planes, and D.C. Districts. Ideal for Emergency Lighting Applications for Civil Defense, Red Cross, Rescue Work, etc., Simply Using Extension Cords.

Featured cut above illustrates Model 12U-RHG.

ATR Universal Inverters are actually a combination of 4 Inverter designs in one unit! These Inverters are especially recommended for applications as mentioned above and feature complete RF frequency interference suppression, instant starting, frequency stability, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated are equipped with ATR heavy duty plug-in Inverter Vibrators. These Inverters also come equipped with four-point voltage regulator which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is in excess of 75%. To figure approximate current consumption from storage battery, divide the rated input wattage of the recorder (or load) being operated by the storage battery voltage and further divide this answer by .75 which will give the actual current consumption based on the actual load and efficiency. The battery current consumption required for a tape recorder is normally less than that drawn by ordinary automobile headlight(s). These Universal Inverters are recommended only for use with loads having power factors in excess of 70%.

ATR Inverters should be used only for the applications as outlined.

Electronic Tube PROTECTOR

Specially Designed To Protect ALL Electronic Tubes in TV or Hi-Fi Sets, Amplifiers, and Similar Electronic Equipment. Will Double or Triple Tube Life Including Picture Tubes.

ATR Electronic Tube Protectors should double or triple the life of all electronic tubes including picture tube in TV or Hi-Fi Sets, Amplifiers, Electronic Organs, and other similar electronic equipment. The ATR Electronic Tube Protector utilizes a thermal cushion-action principle which also protects all other components by eliminating initial damaging surge currents. The ATR Electronic Tube Protector can be used with any electronic equipment having input wattage of 100 to 300 watts. The Electronic Tube Protector plugs into the AC wall socket; whereas, the TV or Hi-Fi Set then plugs into the tube protector receptacle. There will usually be a few seconds thermal cushion-action delay from the instant TV set is turned on to time of normal tube brilliancy due to action of Tube Protector.

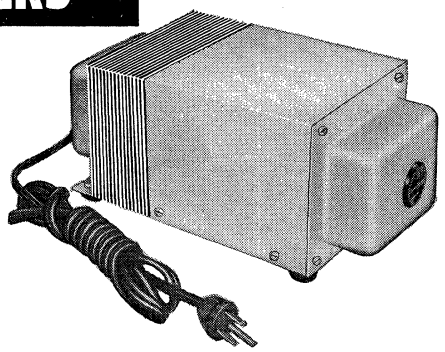
DEPENDABLE PERFORMANCE WITH ACME ELECTRIC

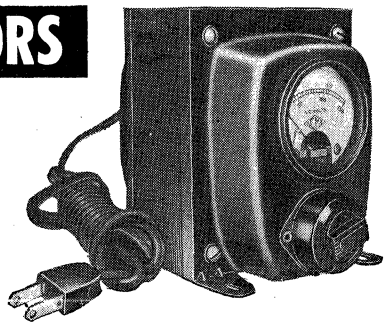
AUTOMATIC VOLTAGE STABILIZERS



This automatic voltage stabilizer has been specifically engineered to provide the necessary stabilization for television receivers up to 24". It is provided with a primary cord and plug for connection to any convenient 115/120 volt, 60 cycle circuit. A built-in receptacle accommodates connection for the TV set. This unit functions only when TV set is turned on. When set is not in use, a built-in relay disconnects primary circuit thus stopping coil magnetism. Operation is noiseless and completely automatic. Voltage fluctuation from 95 to 130 volts is automatically adjusted to stabilized 118 volts ±2% within 1/30th second.

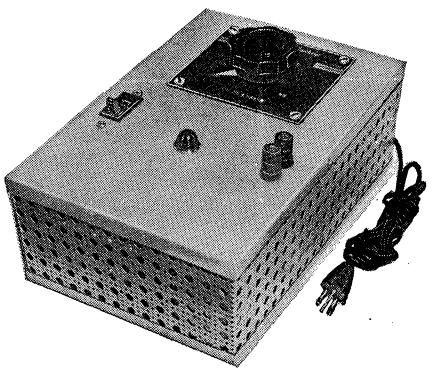
Output capacity 200 VA
Length 11½"; width 5⅜"; height 5¼"
Weight 22 lbs

MANUAL TYPE VOLTAGE ADJUSTORS



The type 8394 M voltage adjustor is ideal for applications where a below normal or above normal voltage exists for relatively long periods of time each day Essentially this is a tapped winding transformer with four below normal voltage contacts and two above normal voltage contacts, to provide voltage correction over a range from 95 to 125 volts. Unit is furnished complete with cord and plug for connection to available circuit, built-in secondary receptacle and includes voltmeter and regulating switch.
Capacity 300 VA
Height 4¾"; width 4"; depth 5"
Weight 5 lbs.

D.C. POWER SUPPLY

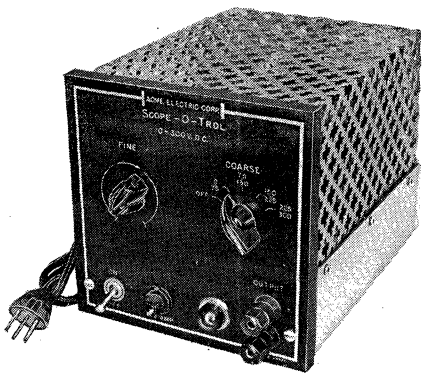


The type PS 6757 is a compact portable instrument that supplies a stabilized direct current, adjustable from 0/45 volts. It is ideal for use in transistor testing, circuit testing, to provide regulated voltage for light testing. Used in place of battery stacks, it provides a dependable direct current source of supply.

Supplied with grounded cord and plug set to connect to any convenient 60 cycle, 95/130 volt circuit. Filtered direct current output range from 0 to 45 volts, 0/2.5 amperes is continuously adjustable and stabilized ±1% at any setting regardless of alternating current fluctuation. Voltage regulation 5% between full load and no-load at full voltage setting.

Portable Model PS 6757
11½" x 7¾" x 4". Weight 23 lbs.
Rack Model PS 1-6757
19" x 5¼" x 7½". Weight 21 lbs.

SCOPE-O-TROL



This is a DC voltage reference supply particularly useful in oscilloscope analysis. It provides an opposing potential which cancels out the direct current increment of a circuit being checked, so that both DC and AC steady state voltages may be observed on the scope in their true form.

This instrument completely eliminates the common method of stacking batteries in various combinations thus completely avoiding the spurious response and great variations frequently resulting from instability of battery output.

Supplied with primary grounded cord and plug for connection to any 115 volt 60 cycle AC circuit. Regulated output range from 0 to 300 volts DC is stabilized at any desired setting. Coarse adjustment is in 75 volt steps. Fine adjustment potentiometer .25/ degree. Ripple is less than 1 millivolt RMS. Current limiting and short circuit protection are inherent features.

Scope-O-Trol type PS-31510

Input 115 volts, 60 cycle. Output 0-300 volts DC

Size: 6" x 6¼" x 9"; weight 7 lbs.

ELECTRONICALLY REGULATED D.C. CONSTANT VOLTAGE POWER SUPPLIES

RELAY RACK MOUNTING TYPES $52.50
MODEL 1-BK (BLACK RIPPLE FRONT PANEL)
MODEL 1-GR (GRAY RIPPLE FRONT PANEL)

Input: 105-125 volts AC. 50-60 cycles.

DC Output Voltage: Continuously variable from 200 to 325 volts DC for load currents 0 to 100 ma.

Regulation of DC Voltage: Better than 1% for loads of 0 to 100 ma. and line voltage variations from 105 to 125 volts.

Ripple Output: Less than 10 millivolts rms.

Isolated Output: Both positive and negative sides of the output are isolated from ground. Either side may be grounded or the output may be left floating.

AC Output for Filaments: An isolated AC voltage of 6.3 volts AC at 3 amperes is available at the output terminal connections.

Overload Protection: A fuse mounted on the front panel protects supply against external overloads or internal failure.

Input and Output Connections: All input and output connections are made to a single terminal strip conveniently located on the rear of the chassis.

Dimensions: Standard 19″ relay rack mounting. Panel Width: 19 inches; Panel Height: 5¼ inches; Depth Behind Panel: 7¼ inches.

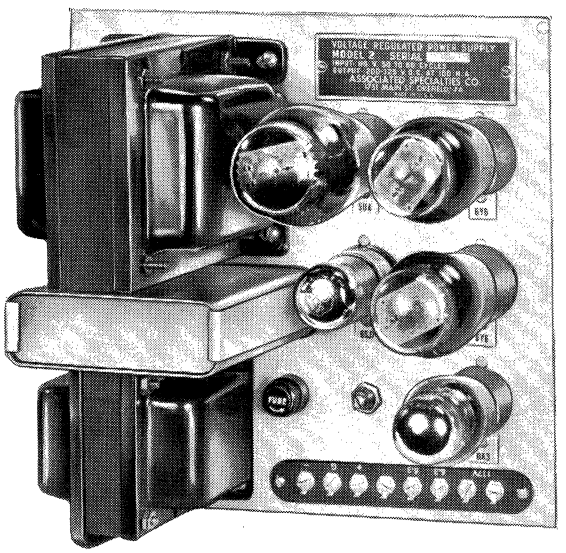
Cabinet Finish: Standard Black ripple enamel.

Controls: Rear Chassis—DC output voltage control. Front Panel —Pilot light, input power switch, and fuse.

Weight: Net weight is approximately 20 pounds.

High Quality Components: Only components of the highest quality are used in this equipment insuring you years of trouble-free dependable operation.

Accessibility: By removing two small screws, the front panel may be removed while the supply stays mounted on a relay rack or cabinet. This allows quick and easy inspection.



MODEL 2 SUB-CHASSIS MOUNTING $49.50

Sub-chassis mounting type regulated power supplies are designed to save space and money. They can be mounted on a chassis along with other components and thereby save space which would be used by a relay rack mounting supply. Savings are made in the size and cost of the cabinet required for a job along with the lower cost of the sub-chassis mounting supplies.

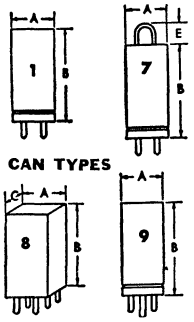
BASE DIAGRAMS: C = Coil; FR = Frame; II = Inertia Interrupter; IR = Inertia Rectifier; IS = Inertia Spring; PI = Pull Interrupter; PR = Pull Rectifier; PS = Pull Spring; R = Reed.

Mallory Vibrators are assembled from carefully matched materials built to extremely close tolerances, assuring perfect balance and precise operation. Crude rubber insulation and heavy cans effectively deaden sound and vibration. Every Mallory vibrator is tested for output, starting voltage and wave form. If Mallory type number is not known refer to diagram above or write for **VIBRATOR GUIDE, 15c** FREE when request is included with order for Mallory Vibrators.



COMMUNICATION TYPE

Designed for mobile communications and other heavy duty uses. Engineered to the finest standards and will give long, trouble-free service when used as recommended.

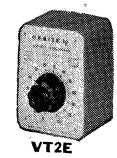
VT2F



VT2E

Toroidal core type autotransformers providing distortion-free continuously adjustable voltage from fixed AC input. Highly advanced Ohmite design. Sizeable bonus in current available in all units where output greater than line volts ("overvoltage") is not required ("N" suffix); "LN" suffix indicates low input (36V max.) and very high current output; positive current transfer achieved with direct brush to slip spring shunt. **Mounting:** VT2 panel mounting by ⅜-32 bushing; VT2 tandem units by ¼-20 bolts; all VT4 and VT8 types panel or table mounting by ¼-20 bolts; VT20, VT20B, panel or table mounting by four ⅜" dia. bolts or three ⅜-24 bolts. Shafts of VT4, VT8, VT20 units slide to brush or base side. Units not cased except where indicated. Frequency 60 to 400 cps except *50 to 400. Over-all dimensions include shaft. Suffixes "-2" and "-3" indicate number of units in tandem assembly (shipped with connection instructions). Cased units (grey crackle) as follows: VT2E, VT4E, VT8E—fixed mounting, in-conduit-line; VT2F, VT4F, VT8F—portable with switch, outlet, fuse; VT8G—portable with overvoltage—no-overvoltage switch, outlet, circuit breaker, adjustable handle (not included in dimension); VT20B—basic protective enclosure which exposes transformer terminal panel.

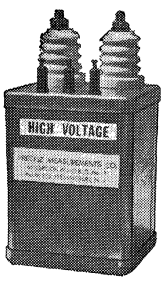
Mirror Scale Higher Accuracy Meter. Recommended for more exact calibration or test purposes. Add $50.00 to any meter equipped power supply.

For additional built-in current meter (both meters are 3 inch size), including automatic meter protector circuit, add $50.00 to any power supply.



PACKAGED POWER SUPPLIES

These conveniently packaged power units will be found ideal for applications requiring minimum size and weight. Features isolated high voltage terminals permitting either the positive or negative side to be grounded. Rectifier tubes are operated from separate filament transformers so that DC output voltage can be varied from zero to full rated value. Selenium rectifier types have extra cells to assure operation under high line voltage or light loading. All standard units have well filtered DC output. FLEXIFORMER®

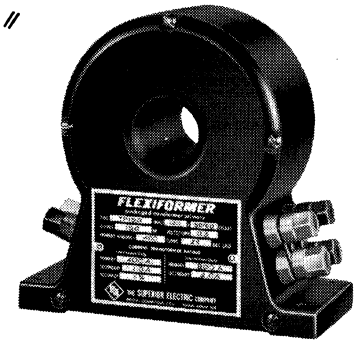
Packaged Transformer Primary

"Do-it-yourself" THE TRANSFORMER

- A SOURCE OF A-C VOLTAGE
- A CURRENT TRANSFORMER
- 150 VA AND 1000 VA TYPES



TYPE TP150

A FLEXIFORMER Packaged Transformer Primary is a self-contained toroidal primary coil encased in durable high impact plastic. Colored SUPERIOR 5-WAY Binding Posts for connections are integrally mounted. When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the FLEXIFORMER winding is shunted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening. Can be portable or fastened permanently
